Recovery and Rebirth: The Age of the Renaissance

CHAPTER OUTLINE AND FOCUS QUESTIONS

Meaning and Characteristics of the Italian Renaissance
Q What characteristics distinguish the Renaissance from the Middle Ages?

The Making of Renaissance Society
Q What major social changes occurred during the Renaissance?

The Italian States in the Renaissance
Q How did Machiavelli’s works reflect the political realities of Renaissance Italy?

The Intellectual Renaissance in Italy
Q What was humanism, and what effect did it have on philosophy, education, attitudes toward politics, and the writing of history?

The Artistic Renaissance
Q What were the chief characteristics of Renaissance art, and how did it differ in Italy and northern Europe?

The European State in the Renaissance
Q Why do historians sometimes refer to the monarchies of the late fifteenth century as “new monarchies” or “Renaissance states”?

The Church in the Renaissance
Q What were the policies of the Renaissance popes, and what impact did those policies have on the Catholic Church?

CRITICAL THINKING

Q How did Renaissance art and the humanist movement reflect the political, economic, and social developments of the period?

WERE THE FOURTEENTH and fifteenth centuries a continuation of the Middle Ages or the beginning of a new era? Both positions can be defended. Although the disintegrative patterns of the fourteenth century continued into the fifteenth, at the same time there were elements of recovery that made the fifteenth century a period of significant political, economic, artistic, and intellectual change. The humanists or intellectuals of the age called their period (from the mid-fourteenth to the mid-sixteenth century) an age of rebirth, believing that they had restored arts and letters to new glory after they had been “neglected” or “dead” for centuries. The humanists also saw their age as one of accomplished individuals who dominated the landscape of their time. Michelangelo, the great Italian artist of the early sixteenth century, and Pope Julius II, the “warrior pope,” were two such titans. The artist’s temperament and the pope’s temper led to many lengthy and often loud quarrels between the two. The pope had hired Michelangelo to paint the ceiling of the Sistine Chapel in Rome, a difficult task for a man long accustomed to being a sculptor. Michelangelo undertook the project but refused for a long time to allow anyone, including the pope, to see his work. Julius grew anxious, pestering Michelangelo on a regular basis about when the ceiling would be finished.
Exasperated by the pope’s requests, Michelangelo once replied, according to Giorgio Vasari, his contemporary biographer, that the ceiling would be completed “when it satisfies me as an artist.” The pope responded, “And we want you to satisfy us and finish it soon,” and then threatened that if Michelangelo did not “finish the ceiling quickly,” the pope would “have him thrown down from the scaffolding.” Fearing the pope’s anger, Michelangelo “lost no time in doing all that was wanted” and quickly completed the ceiling, one of the great masterpieces in the history of Western art.

The humanists’ view of their age as a rebirth of the Classical civilization of the Greeks and Romans ultimately led historians to use the French word Renaissance to identify this age. Although recent historians have emphasized the many elements of continuity between the Middle Ages and the Renaissance, the latter age was also distinguished by its own unique characteristics.

Meaning and Characteristics of the Italian Renaissance

FOCUS QUESTION: What characteristics distinguish the Renaissance from the Middle Ages?

Renaissance means “rebirth.” Many people who lived in Italy between 1350 and 1550 believed that they had witnessed a rebirth of antiquity or Greco-Roman civilization, marking a new age. To them, the thousand or so years between the end of the Roman Empire and their own era constituted a middle period (the “Middle Ages”), characterized by darkness because of its lack of Classical culture. Historians of the nineteenth century later used similar terminology to describe this period in Italy. The Swiss historian and art critic Jacob Burckhardt (YAK-ub BOORK-hart) created the modern concept of the Renaissance in his celebrated book The Civilization of the Renaissance in Italy, published in 1860. He portrayed Italy in the fourteenth and fifteenth centuries as the birthplace of the modern world (the Italians were “the firstborn among the sons of modern Europe”) and saw the revival of antiquity, the “perfecting of the individual,” and secularism (“worldliness of the Italians”) as its distinguishing features. Burckhardt exaggerated the individuality and secularism of the Renaissance and failed to recognize the depths of its religious sentiment; nevertheless, he established the framework for all modern interpretations of the period. Although contemporary scholars do not believe that the Renaissance represents a sudden or dramatic cultural break with the Middle Ages, as Burckhardt argued—there was, after all, much continuity in economic, political, and social life—the Renaissance can still be viewed as a distinct period of European history that manifested itself first in Italy and then spread to the rest of Europe.

Renaissance Italy was largely an urban society. As a result of its commercial preeminence and political evolution, northern Italy by the mid-fourteenth century was mostly a land of independent cities that dominated the country districts around them. These city-states became the centers of Italian political, economic, and social life. Within this new urban society, a secular spirit emerged as increasing wealth created new possibilities for the enjoyment of worldly things (see the box on p. 342).

Above all, the Renaissance was an age of recovery from the calamitous fourteenth century, a time for the slow process of recuperating from the effects of the Black Death, political disorder, and economic recession. This recovery was accompanied by a rediscovery of the culture of Classical antiquity. Increasingly aware of their own historical past, Italian intellectuals became intensely interested in the Greco-Roman culture of the ancient Mediterranean world. This revival of Classical antiquity (the Middle Ages had in fact preserved much of ancient Latin culture) affected activities as diverse as politics and art and led to new attempts to reconcile the pagan philosophy of the Greco-Roman world with Christian thought, as well as new ways of viewing human beings.

A revived emphasis on individual ability became a characteristic of the Italian Renaissance. As the fifteenth-century Florentine architect Leon Battista Alberti (al-BAYR-tee) expressed it, “Men can do all things if they will.”¹ A high regard for human dignity and worth and a realization of individual potentiality created a new social ideal of the well-rounded personality or universal person—l’uomo universale (LWOH-moh OO-nee-ver-SAHL-lay)—who was capable of achievements in many areas of life.

These general features of the Italian Renaissance were not characteristic of all Italians but were primarily the preserve of the wealthy upper classes, who constituted a small percentage of the total population. The achievements of the Italian Renaissance were the product of an elite, rather than a mass, movement. Nevertheless, indirectly it did have some impact on ordinary people, especially in the cities, where so many of the intellectual and artistic accomplishments of the period were most visible.

The Making of Renaissance Society

FOCUS QUESTION: What major social changes occurred during the Renaissance?

After the severe economic reversals and social upheavals of the fourteenth century, the European economy gradually recovered as the volume of manufacturing and trade increased.

Economic Recovery

By the fourteenth century, Italian merchants were carrying on a flourishing commerce throughout the Mediterranean and had also expanded their lines of trade north along the Atlantic seaboard. The great galleys of the Venetian Flanders Fleet maintained a direct sea route
A Renaissance Banquet

As in Greek and Roman society, a banquet during the Renaissance was an occasion for good food, interesting conversation, music, and dancing. In Renaissance society, it was also a symbol of status and an opportunity to impress people with the power and wealth of one’s family. Banquets were held to celebrate public and religious festivals, official visits, anniversaries, and weddings. The following menu lists the foods served at a grand banquet given by Pope Pius V in the sixteenth century.

A Sixteenth-Century Banquet

First Course
Cold Delicacies from the Sideboard
- Pieces of marzipan and marzipan balls
- Neapolitan spice cakes
- Malaga wine and Pisan biscuits
- Fresh grapes
- Prosciutto cooked in wine, served with capers and grape pulp
- Salted pork tongues cooked in wine, sliced
- Spit-roasted songbirds, cold, with their tongues sliced over them
- Sweet mustard

Second Course
Cold Hot Foods from the Kitchen, Roasts
- Fried veal sweetbreads and liver
- Spit-roasted skylarks with lemon sauce
- Spit-roasted quails with sliced eggplants
- Stuffed spit-roasted pigeons with capers sprinkled over them
- Spit-roasted rabbits, with sauce and crushed pine nuts
- Partridges larded and spit-roasted, served with lemon
- Heavily seasoned poultry with lemon slices
- Slices of veal, spit-roasted, with a sauce made from the juices
- Leg of goat, spit-roasted, with a sauce made from the juices
- Soup of almond paste, with the flesh of three pigeons to each serving

Third Course
Hot Foods from the Kitchen, Boiled Meats and Stews
- Stuffed fat geese, boiled Lombard style and covered with sliced almonds
- Stuffed breast of veal, boiled, garnished with flowers
- Very young calf, boiled, garnished with parsley
- Almonds in garlic sauce
- Turkish-style rice with milk, sprinkled with cinnamon
- Stewed pigeons with mortadella sausage and whole onions
- Cabbage soup with sausages
- Poultry pie, two chickens to each piece
- Fricassee breast of goat dressed with fried onions
- Pies filled with custard cream
- Boiled calves’ feet with cheese and egg

Fourth Course
Delicacies from the Sideboard
- Bean tarts
- Quince pastries
- Pear tarts, the pears wrapped in marzipan
- Parmesan cheese and Riviera cheese
- Fresh almonds on vine leaves
- Chestnuts roasted over the coals and served with salt and pepper
- Milk curds
- Ring-shaped cakes
- Wafers made from ground grain

What kinds of people would be present at a banquet where these foods would be served? What does this menu tell you about the material culture of the Renaissance and the association of food with social status?

from Venice to England and the Netherlands, where Italian merchants came into contact with the increasingly powerful Hanseatic League of merchants. Hard hit by the plague, the Italians lost their commercial preeminence while the Hanseatic League continued to prosper.

Expansion of Trade  As early as the thirteenth century, a number of North German coastal towns had formed a commercial and military association known as the Hansa, or Hanseatic League. By 1500, more than eighty cities belonged to the League, which had established settlements and commercial bases in many cities in England and northern Europe, including the chief towns of Denmark, Norway, and Sweden. For almost two hundred years, the Hansa had a monopoly on northern European trade in timber, fish, grain, metals, honey, and wines. Its southern outlet in Flanders, the port city of Bruges, became the economic crossroads of Europe in the
fourteenth century, serving as the meeting place between Hanseatic merchants and the Flanders Fleet of Venice. In the fifteenth century, however, silting of the port caused Bruges to enter a slow decline. So did the Hanseatic League, which was increasingly unable to compete with the developing larger territorial states.

Overall, trade recovered dramatically from the economic contraction of the fourteenth century. The Italians and especially the Venetians, despite new restrictive pressures on their eastern Mediterranean trade from the Ottoman Turks (see “The Ottoman Turks and the End of the Byzantine Empire” later in this chapter), continued to maintain a wealthy commercial empire. Not until the sixteenth century, when transatlantic discoveries gave new importance to the states along the ocean, did the petty Italian city-states begin to suffer from the competitive advantages of the ever-growing and more powerful national territorial states.

**INDUSTRIES OLD AND NEW** The economic depression of the fourteenth century also affected patterns of manufacturing. The woolen industries of Flanders and the northern Italian cities had been particularly devastated. By the beginning of the fifteenth century, however, the Florentine woolen industry had begun to recover. At the same time, the Italian cities began to develop and expand luxury industries, especially silk, glassware, and hand-worked items in metal and precious stones.

Other new industries, especially printing, mining, and metallurgy, began to rival the textile industry in importance in the fifteenth century. New machinery and techniques for digging deeper mines and for separating metals from ore and purifying them were developed. When rulers began to transfer their titles to underground minerals to financiers as collateral for loans, these entrepreneurs quickly developed large mining operations to produce copper, iron, and silver. Especially valuable were the rich mineral deposits in central Europe, Hungary, the Tyrol, Bohemia, and Saxony. Expanding iron production and new skills in metalworking in turn contributed to the development of firearms that were more effective than the crude weapons of the fourteenth century.

**BANKING AND THE MEDICI** The city of Florence regained its preeminence in banking in the fifteenth century, due primarily to the Medici family. The Medici had expanded from cloth production into commerce, real estate, and banking. In its best days (in the fifteenth century), the House of Medici was the greatest bank in Europe, with branches in Venice, Milan, Rome, Avignon, Bruges, London, and Lyons. Moreover, the family had controlling interests in industrial enterprises for wool, silk, and the mining of alum, used in the dyeing of textiles. Except for a brief period, the Medici were also the principal bankers for the papacy, a position that produced big profits and influence at the papal court. Despite its great success in the early and middle part of the fifteenth century, the Medici bank suffered a rather sudden decline at the end of the century due to poor leadership and a series of bad loans, especially uncollectible loans to rulers. In 1494, when the French expelled the Medici from Florence and confiscated their property, the Medici financial edifice collapsed.

**Social Changes in the Renaissance**
The Renaissance inherited its social structure from the Middle Ages. Society remained fundamentally divided
into three estates: the First Estate, the clergy, whose preeminence was grounded in the belief that people should be guided to spiritual ends; the Second Estate, the nobility, whose privileges were based on the principle that the nobles provided security and justice for society; and the Third Estate, which consisted of the peasants and inhabitants of the towns and cities. This social order experienced certain adaptations in the Renaissance, which we can see by examining the Second and Third Estates (the clergy will be examined in Chapter 13).

THE NOBILITY Throughout much of Europe, the landholding nobles faced declining real incomes during the greater part of the fourteenth and fifteenth centuries, while the expense of maintaining noble status was rising. Nevertheless, members of the old nobility survived, and new blood infused their ranks. A reconstruction of the aristocracy was well under way by 1500.

As a result, the nobles, old and new, who constituted between 2 and 3 percent of the population in most countries, managed to dominate society as they had done in the Middle Ages, serving as military officers and holding important political posts as well as advising the king. In the sixteenth century, members of the aristocracy increasingly pursued education as the means to maintain their role in government.

By 1500, certain ideals came to be expected of the aristocrat. These were best expressed in The Book of the Courtier by the Italian Baldassare Castiglione (bai-duh-SAH-ray ka-steel-YOH-nay) (1478–1529). First published in 1528, Castiglione’s work soon became popular throughout Europe and remained a fundamental handbook for European aristocrats for centuries. In it, Castiglione described the three basic attributes of the perfect courtier. First, nobles should possess fundamental native endowments, such as impeccable character, grace, talents, and noble birth. The perfect courtier must also cultivate certain achievements. Primarily, he should participate in military and bodily exercises, because the principal profession of a courtier was bearing arms. But unlike the medieval knight, who had been required only to have military skill, the Renaissance courtier was also expected to have a Classical education and to adorn his life with the arts by playing a musical instrument, drawing, and painting. In Castiglione’s hands, the Renaissance ideal of the well-developed personality became a social ideal of the aristocracy. Finally, the aristocrat was expected to follow a certain standard of conduct. Nobles were to make a good impression; while being modest, they should not hide their accomplishments but show them with grace.

What was the purpose of these courtly standards? Castiglione wrote:

I think that the aim of the perfect Courtier, which we have not spoken of up to now, is so to win for himself, by means of the accomplishments ascribed to him by these gentlemen, the favor and mind of the prince whom he serves that he may be able to tell him, and always will tell him, the truth about everything he needs to know, without fear or risk of displeasing him; and that when he sees the mind of his prince inclined to a wrong action, he may dare to oppose him . . . so as to dissuade him of every evil intent and bring him to the path of virtue.

The aim of the perfect noble, then, was to serve his prince in an effective and honest way. Nobles would adhere to these principles for hundreds of years while they continued to dominate European life socially and politically.

PEASANTS AND TOWNSPEOPLE Peasants made up the overwhelming mass of the Third Estate and continued to constitute 85 to 90 percent of the European population, except in the highly urbanized areas of northern Italy and Flanders. The most noticeable trend produced by the economic crisis of the fourteenth century was the decline of the manorial system and the continuing elimination of serfdom. This process had already begun in the twelfth century when the introduction of a money economy made possible the conversion of servile labor dues into rents paid in money, although they also continued to be paid in kind or labor. The contraction of the peasantry after the Black Death simply accelerated this process, since lords found it convenient to deal with the peasants by granting freedom and accepting rents. The lords’ lands were then tilled by hired workers or rented out. By the end of the fifteenth century, serfdom was declining in western Europe, and more and more peasants were becoming legally free.

The remainder of the Third Estate centered around the inhabitants of towns and cities, originally the merchants and artisans who formed the bourgeoisie. The Renaissance town or city of the fifteenth century actually was home to a multitude of townspeople widely separated socially and economically. At the top of urban society were the patricians, whose wealth from capitalistic enterprises in trade, industry, and banking enabled them to dominate their urban communities economically, socially, and politically. Below them were the petty burghers—the shopkeepers, artisans, guildmasters, and guild members, who were largely concerned with providing goods and services for local consumption. Below these two groups were the propertyless workers earning pitiful wages and the unemployed, living squalid and miserable lives; these people constituted 30 to 40 percent of the population living in cities. In many places in Europe in the late fourteenth and fifteenth centuries, urban poverty increased dramatically. One rich merchant of Florence wrote:

Those that are lazy and indolent in a way that does harm to the city, and who can offer no just reason for their condition, should either be forced to work or expelled from the Commune. The city would thus rid itself of that most harmful part of the poorest class.... If the lowest order of society earn enough food to keep them going from day to day, then they have enough.
But even this large group was not at the bottom of the social scale; beneath them were the slaves, especially in the Italian cities.

SLAVERY IN THE RENAISSANCE Agricultural slavery existed in the Early Middle Ages but had declined for economic reasons and been replaced by serfdom by the ninth century. Although some domestic slaves remained, slavery in European society had largely disappeared by the eleventh century. It reappeared first in Spain, where both Christians and Muslims used captured prisoners as slaves during the lengthy Reconquista. In the second half of the fourteenth century, the shortage of workers after the Black Death led Italians to introduce slavery on a fairly large scale. In 1363, for example, the government of Florence authorized the unlimited importation of foreign slaves.

In the Italian cities, slaves were used as skilled workers, making handcrafted goods for their masters, or as household workers. Girls served as nursemaids and boys as playmates. Fiammetta Adimari wrote to her husband in 1469: “I must remind you that when Alfonso is weaned we ought to get a little slave-girl to look after him, or else one of the black boys to keep him company.” Most slaves, though, were females, many of them young girls. In Florence, wealthy merchants might own two or three slaves. Often men of the household took slaves as concubines, which sometimes led to the birth of illegitimate children. In 1392, the wealthy merchant Francesco Datini fathered an illegitimate daughter by Lucia, his twenty-year-old slave. His wife, Margherita, who was unable to bear any children, reluctantly agreed to raise the girl as their own daughter. Many illegitimate children were not as fortunate.

Slaves for the Italian market were obtained primarily from the eastern Mediterranean and the Black Sea region and included Tartars, Russians, Albanians, and Dalmatians. There were also slaves from Africa, either Moors or Ethiopians, and Muslims from Spain. Because of the lucrative nature of the slave trade, Italian merchants became involved in the transportation of slaves. Between 1414 and 1423, ten thousand slaves were sold on the Venetian market.

By the end of the fifteenth century, slavery had declined dramatically in the Italian cities. Many slaves had been freed by their owners for humanitarian reasons, and the major source of slaves dried up as the Black Sea slave markets were closed to Italian traders after the Turks conquered the Byzantine Empire. Although some other sources remained, prices rose dramatically, further cutting demand. Moreover, a general feeling had arisen that slaves—the “domestic enemy,” as they were called—were dangerous and not worth the effort. By the sixteenth century, slaves were in evidence only at princely courts, where they were kept as curiosities; this was especially true of black slaves.

In the fifteenth century, the Portuguese had imported increasing numbers of African slaves for southern European markets. It has been estimated that between 1444 and 1505, some 140,000 slaves were shipped from Africa.

The presence of blacks in European society was not entirely new. Saint Maurice, a Christian martyr of the fourth century, was portrayed by medieval artists as a black knight and became the center of a popular cult in the twelfth and thirteenth centuries. The number of blacks in Europe was small, however, until their importation as slaves.

The Family in Renaissance Italy

The family played an important role in Renaissance Italy. Family meant, first of all, the extended household of parents, children, and servants (if the family was wealthy) and could also include grandparents, widowed mothers, and even unmarried sisters. Families that were related and bore the same surname often lived near each other and might dominate an entire urban district. Old family names—Strozzi (STRAWT-see), Rucellai (ROO-CHELL-eye), Medici—conferred great status and prestige. The family bond was a source of great security in a dangerous and violent world, and its importance helps explain the vendetta in the Italian Renaissance. A crime committed by one family member fell on the entire family, ensuring that retaliation by the offended family would be a bloody affair involving large numbers of people.

MARRIAGE To maintain the family, parents gave careful attention to arranging marriages, often to strengthen business or family ties. Details were worked out well in advance, sometimes when children were only two or three years old, and reinforced by a legally binding marriage contract (see the box on p. 347). The important aspect of the contract was the size of the dowry, money presented by the wife’s family to the husband upon marriage. The dowry could involve large sums and was expected of all families. The size of the dowry was an indication of whether the bride was moving upward or downward in society. With a large dowry, a daughter could marry a man of higher social status, thereby enabling her family to move up in society; if the daughter married a man of lower social status, however, her dowry would be smaller because the reputation of her family would raise the status of her husband’s family.

The father-husband was the center of the Italian family. He gave it his name, was responsible for it in all legal matters, managed all finances (his wife had no share in his wealth), and made the crucial decisions that determined his children’s lives. A father’s authority over his children was absolute until he died or formally freed his children. In Renaissance Italy, children did not become adults on reaching a certain age; adulthood came only when the father went before a judge and formally emancipated them. The age of emancipation varied from early teens to late twenties.

CHILDREN The wife managed the household, a position that gave women a certain degree of autonomy in their
daily lives. Women of the upper and middle classes, however, were expected to remain at home, under the supervision of their father or husband. Moreover, most wives knew that their primary function was to bear children. Upper-class wives were frequently pregnant; Alessandra Strozzi of Florence, for example, who had been married at the age of sixteen, bore eight children in ten years. Poor women did not conceive at the same rate because they nursed their own babies. Wealthy women gave their infants out to wet nurses, which enabled them to become pregnant more quickly after the birth of a child.

For women in the Renaissance, childbirth was a fearful occasion. Not only was it painful, but it could be deadly; as many as 10 percent of mothers died in childbirth. In his memoirs, the Florentine merchant Gregorio Dati recalled that three of his four wives had died in childbirth. His third wife, after bearing eleven children in fifteen years, “died in childbirth after lengthy suffering, which she bore with remarkable strength and patience.” Nor did the tragedies end with childbirth. Surviving mothers often faced the death of their children. In Florence in the fifteenth century, for example, almost 50 percent of the children born to merchant families died before the age of twenty. Given these mortality rates, many upper-class families sought to have as many children as possible to ensure that there would be a surviving male heir to the family fortune. This concern is evident in the Florentine humanist Leon Battista Alberti’s treatise On the Family, where one of the characters remarks, “How many families do we see today in decadence and ruin! . . . Of all these families not only the magnificence and greatness but the very men, not only the men but the very names are shrunk away and gone. Their memory . . . is wiped out and obliterated.”

SEXUAL NORMS Considering that marriages were arranged, marital relationships ran the gamut from deep emotional attachments to purely formal ties. The lack of emotional attachment in arranged marriages did encourage extramarital relationships, especially among groups whose lifestyle offered special temptations. Although sexual license for males was the norm for princes and their courts, women were supposed to follow different guidelines. The first wife of Duke Filippo Maria Visconti of Milan had an affair with the court musician and was executed for it.

The great age difference between husbands and wives in Italian Renaissance marriage patterns also encouraged the tendency to seek sexual outlets outside marriage. In Florence in 1427–1428, the average difference was thirteen years. Though females married between the ages of sixteen and eighteen, factors of environment, wealth, and demographic trends favored relatively late ages for the first marriages of males, who were usually in their thirties or even early forties. The existence of large numbers of young, unmarried males encouraged extramarital sex as well as prostitution. Prostitution was viewed as a necessary...
Marriage Negotiations

Marriages were so important in maintaining families in Renaissance Italy that much energy was put into arranging them. Parents made the choices for their children, most often for considerations that had little to do with the modern notion of love. This selection is taken from the letters of a Florentine matron of the illustrious Strozzi family to her son Filippo in Naples. The family's considerations were complicated by the fact that the son was in exile.

Alessandra Strozzi to Her Son Filippo in Naples

[April 20, 1464] . . . Concerning the matter of a wife [for you], it appears to me that if Francesco di Messer Tanagli wishes to give his daughter, that it would be a fine marriage. . . . Now I will speak with Marco [Parenti, Alessandra's son-in-law], to see if there are other prospects that would be better, and if there are none, then we will learn if he wishes to give her [in marriage]. . . . Francesco Tanagli has a good reputation, and he has held office, not the highest, but still he has been in office. You may ask: “Why should he give her to someone in exile?” There are three reasons. First, there aren’t many young men of good family who have both virtue and property. Second, she has only a small dowry, 1,000 florins, which is the dowry of an artisan [although not a small sum, either—senior officials in the government bureaucracy earned 300 florins a year]. . . . Third, I believe that he will give her away, because he has a large family and he will need help to settle them. . . .

[July 26, 1465] . . . Francesco is a good friend of Marco and he trusts him. On S. Jacopo’s day, he spoke to him discreetly and persuasively, saying that for several months he had heard that we were interested in the girl and . . . that when we had made up our minds, she will come to us willingly. [He said that] you were a worthy man, and that his family had always made good marriages, but that he had only a small dowry to give her, and so he would prefer to send her out of Florence to someone of worth, rather than to give her to someone here, from among those who were available, with little money. . . . We have information that she is affable and competent. She is responsible for a large family (there are twelve children, six boys and six girls), and the mother is always pregnant and isn’t very competent. . . .

[August 31, 1465] . . . I have recently received some very favorable information [about the Tanagli girl] from two individuals. . . . They are in agreement that whoever gets her will be content. . . . Concerning her beauty, they told me what I had already seen, that she is attractive and well-proportioned. Her face is long, but I couldn’t look directly into her face, since she appeared to be aware that I was examining her . . . and so she turned away from me like the wind. . . . She reads quite well. . . . and she can dance and sing. . . .

So yesterday I sent for Marco and told him what I had learned. And we talked about the matter for a while, and decided that he should say something to the father and give him a little hope, but not so much that we couldn’t withdraw, and find out from him the amount of the dowry. . . . May God help us to choose what will contribute to our tranquility and to the consolation of us all.

[September 13, 1465] . . . Marco came to me and said that he had met with Francesco Tanagli, who had spoken very coldly, so that I understand that he had changed his mind. . . .

[Filippo Strozzi eventually married Fiametta di Donato Adimari in 1466.]

Q: What were the most important considerations in marriage negotiations? Why were they so important?

The Italian States in the Renaissance

Q: Focus Question: How did Machiavelli’s works reflect the political realities of Renaissance Italy?

By the fifteenth century, five major powers dominated the Italian peninsula: Milan, Venice, Florence, the Papal States, and Naples (see Map 12.1).

The Five Major States

Northern Italy was divided between the duchy of Milan and the republic of Venice. After the death of the last Visconti ruler of Milan in 1447, Francesco Sforza (frahn-CHESS-koh SFORT-sah), one of the leading condottieri of
the time (see Chapter 11), turned on his Milanese employers, conquered the city, and became its new duke. Both the Visconti and the Sforza rulers worked to create a highly centralized territorial state. They were especially successful in devising systems of taxation that generated enormous revenues for the government. The maritime republic of Venice remained an extremely stable political entity governed by a small oligarchy of merchant-aristocrats. Its commercial empire brought in enormous energy toward reestablishing their control over the Papal States (see “The Renaissance Papacy” later in this chapter).

PAPAL STATES The Papal States lay in central Italy. Although these lands were nominally under the political control of the popes, papal residence in Avignon and the Great Schism had enabled individual cities and territories, such as Urbino, Bologna (buh-LOHN-yuh), and Ferrara, to become independent of papal authority. The Renaissance popes of the fifteenth century directed much of their energy toward reestablishing their control over the Papal States (see “The Renaissance Papacy” later in this chapter).

KINGDOM OF NAPLES The kingdom of Naples, which encompassed most of southern Italy and usually the island of Sicily, was fought over by the French and the Aragonese until the latter established their domination in the mid-fifteenth century. Throughout the Renaissance, the kingdom of Naples remained a backward monarchy with a population consisting largely of poverty-stricken peasants dominated by unruly nobles. It shared little in the cultural glories of the Renaissance.

Independent City-States

Besides the five major states, there were a number of independent city-states under the control of powerful
ruling families that became brilliant centers of Renaissance culture in the fifteenth century. These included Mantua, under the enlightened rule of the Gonzaga (gun-DZAH-gah) lords; Ferrara, governed by the flamboyant d’Este (DESS-tay) family; and perhaps the most famous, Urbino, ruled by the Montefeltro dynasty.

URBINO  Federigo da Montefeltro (fay-day-REE-goh dah mahn-tuh-FELL-troh), who ruled Urbino from 1444 to 1482, received a Classical education typical of the famous humanist school in Mantua run by Vittorino da Feltre (vee-tor-EE-noh dah FELL-tray) (1378–1446). He also learned the skills of fighting, since the Montefeltro family compensated for the poverty of Urbino by hiring themselves out as condottieri. Federigo was not only a good ruler but also a rather unusual condottiere by fifteenth-century standards. Although not a brilliant general, he was reliable and honest. He did not break his promises, even when urged to do so by a papal legate. At the same time, Duke Federigo was one of the greatest patrons of Renaissance culture. Under his direction, Urbino became a well-known cultural and intellectual center. Though a despot, Federigo was also benevolent. It was said of him that he could walk safely through the streets of Urbino unaccompanied by a bodyguard, a feat few Renaissance rulers dared to emulate.

THE ROLE OF WOMEN  A noticeable feature of these smaller Renaissance courts was the important role played by women. Battista Sforza, niece of the ruler of Milan, was the wife of Federigo da Montefeltro. The duke called his wife “the delight of both my public and my private hours.” An intelligent woman, she was well versed in both Greek and Latin and did much to foster art and letters in Urbino. As a prominent condottiere, Federigo was frequently absent, and like the wives of medieval lords, Battista Sforza was respected for governing the state “with firmness and good sense.”

Perhaps the most famous of the Renaissance ruling women was Isabella d’Este (1474–1539), daughter of the duke of Ferrara, who married Francesco Gonzaga, marquis of Mantua. Their court was another important center of art and learning in the Renaissance. Educated at the brilliant court of Ferrara, Isabella was known for her intelligence and political wisdom. Called the “first lady of the world,” she attracted artists and intellectuals to the Mantuan court and was responsible for amassing one of the finest libraries in all of Italy. Her numerous letters to friends, family, princes, and artists all over Europe reveal her political acumen as well as her good sense of humor (see the box on p. 350). Both before and after the death of her husband, she effectively ruled Mantua and won a reputation as a clever negotiator.

Warfare in Italy

The fragmented world of the Italian territorial states gave rise to a political practice that was later used on a larger scale by competing European states. This was the concept of a balance of power, designed to prevent the aggrandizement of any one state at the expense of the others. This system was especially evident after 1454 when the Italian states signed the Peace of Lodi, which ended almost a half-century of war and inaugurated a relatively peaceful forty-year era in Italy. An alliance system (Milan, Florence, and Naples versus Venice and the papacy) was then created that led to a workable balance of power within Italy. It failed, however, to establish lasting cooperation among the major powers or a common foreign policy.

The growth of powerful monarchical states (see “The European State in the Renaissance” later in this chapter) led to trouble for the Italians. Italy soon became a battlefield for the great power struggle between the French and Spanish monarchies. Italian wealth and splendor would probably have been inviting to its northern neighbors under any circumstances, but it was actually the
Many Italian and European rulers at the beginning of the sixteenth century regarded Isabella d’Este as an important political figure. These excerpts from her letters reveal Isabella’s political skills and her fierce determination. After her husband was taken prisoner by the Venetians in 1509, she refused to accept the condition for his release—namely, that her son Federico be kept as a hostage by the Venetians or the Holy Roman Emperor. She wrote to both the emperor and her husband, refusing to do as they asked.

**Letter of Isabella d’Este to the Imperial Envoy**

As to the demand for our dearest first-born son Federico, besides being a cruel and almost inhuman thing for any one who knows the meaning of a mother’s love, there are many reasons which render it difficult and impossible. Although we are quite sure that his person would be well cared for and protected by His Majesty [the Holy Roman Emperor], how could we wish him to run the risk of this long and difficult journey, considering the child’s tender and delicate age? And you must know what comfort and solace, in his father’s present unhappy condition, we find in the presence of this dear son, the hope and joy of all our people and subjects. To deprive us of him, would be to deprive us of life itself, and of all we count good and precious. If you take Federico away you might as well take away our life and state.... Once for all, we will suffer any loss rather than part from our son, and this you may take to be our deliberate and unchanging resolution.

**Letter of Isabella d’Este to Her Husband, Who Had Ordered Her to Send the Boy to Venice**

If in this matter Your Excellency were to despise me and deprive me of your love and grace, I would rather endure such harsh treatment, I would rather lose our State, than deprive us of our children. I am hoping that in time your own prudence and kindness will make you understand that I have acted more lovingly toward you than you have to yourself.

Have patience! You can be sure that I think continuously of your liberation and when the time comes I will not fail you, as I have not relaxed my efforts. As witness I cite the Pope, the Emperor, the King of France, and all the other reigning heads and potentates of Christendom. Yes, and the infidels as well [she had written to the Turkish sultan for help]. If it were really the only means of setting you free, I would not only send Federico but all the other children as well. I will do everything imaginable. Some day I hope I can make you understand....

Pardon me if this letter is badly written and worse composed, but I do not know if I am dead or alive.

*Isabella, who desires the best for Your Excellency, written with her own hand*

[Isabella’s husband was not pleased with her response and exclaimed angrily: “That whore of my wife is the cause of it all. Send me into battle alone, do what you like with me. I have lost in one blow my state, my honor and my freedom. If she does not obey, I’ll cut her vocal cords.”] Ex-

**Q** What do these letters reveal about Isabella’s character and about the attributes and strategies of expression on which noble women had to rely in order to participate effectively in high politics?

breakdown of the Italian balance of power that encouraged the invasions and began the Italian wars. Feeling isolated, Ludovico Sforza, the duke of Milan, foolishly invited the French to intervene in Italian politics. The French king Charles VIII (1483–1498) was eager to do so, and in 1494, with an army of 30,000 men, he advanced through Italy and occupied the kingdom of Naples. Other Italian states turned to the Spanish for help, and Ferdinand of Aragon indicated his willingness to intervene. For the next fifteen years, the French and Spanish competed to dominate Italy. After 1510, the war was continued by a new generation of rulers, Francis I of France and Charles I of Spain (see Chapter 13). This war was part of a long struggle for power throughout Europe between the Valois and Habsburg dynasties. Italy was only a pawn for the two great powers, a convenient arena for fighting battles. The terrible sack of Rome in 1527 by the armies of the Spanish king Charles I brought a temporary end to the Italian wars. Thereafter, the Spaniards dominated Italy.

Although some Italians had developed a sense of national consciousness and differentiated between Italians and “barbarians” (all foreigners), few Italians conceived of creating an alliance or confederation of states that could repel foreign invaders. Italians remained fiercely loyal to their own petty states, making invasion a fact of life in Italian history for all too long. Italy would not achieve unification and nationhood until 1870.

**The Birth of Modern Diplomacy**

The modern diplomatic system was a product of the Italian Renaissance. There were ambassadors in the Middle Ages, but they were used only on a temporary basis. Moreover, an ambassador, regardless of whose subject he was, regarded
himself as the servant of all Christendom, not just of his particular employer. As a treatise on diplomacy stated, "An ambassador is sacred because he acts for the general welfare." Since he was the servant of all Christendom, "the business of an ambassador is peace." 

This concept of an ambassador changed during the Italian Renaissance because of the political situation in Italy. A large number of states existed, many so small that their security was easily threatened by their neighbors. To survive, the Italian states began to send resident diplomatic agents to each other to ferret out useful information. During the Italian wars, the practice of resident diplomats spread to the rest of Europe, and in the course of the sixteenth and seventeenth centuries, Europeans developed the diplomatic machinery still in use today, such as the rights of ambassadors in host countries and the proper procedures for conducting diplomatic business.

With the use of permanent resident agents or ambassadors, the conception of the purpose of an ambassador also changed. A Venetian diplomat attempted to define an ambassador's function in a treatise written at the end of the fifteenth century. He wrote, "The first duty of an ambassador is exactly the same as that of any other servant of a government, that is, to do, say, advise, and think whatever may best serve the preservation and aggrandizement of his own state." An ambassador was now an agent only of the territorial state that sent him, not the larger body of Christendom. He could use any methods that were beneficial to the political interests of his own state. We are at the beginning of modern politics when the interests of the state supersede all other considerations.

Machiavelli and the New Statecraft

No one gave better expression to the Renaissance preoccupation with political power than Niccolò Machiavelli (nee-koh-LOH mahk-ee-uh-VEL-ee) (1469–1527). He entered the service of the Florentine republic in 1498, four years after the Medici family had been expelled from the city. As a secretary to the Florentine Council of Ten, he made numerous diplomatic missions, including trips to France and Germany, and saw the workings of statecraft at first hand. Machiavelli’s political activity occurred during the period of tribulation and devastation for Italy that followed the French invasion in 1494. In 1512, French defeat and Spanish victory led to the reestablishment of Medici power in Florence. Staunch republicans, including Machiavelli, were sent into exile. Forced to give up politics, the great love of his life, Machiavelli now reflected on political power and wrote books, including The Prince (1513), one of the most famous treatises on political power in the Western world.

THE PRINCE

Machiavelli’s ideas on politics stemmed from two major sources, his knowledge of ancient Rome and his preoccupation with Italy’s political problems. As a result of his experiences, Machiavelli fully realized that the small Italian states were no match for the larger monarchical states outside Italy’s borders and that Italy itself had become merely a battleground for the armies of foreign states. His major concerns in The Prince were the acquisition and expansion of political power as the means to restore and maintain order in his time. Late medieval political theorists believed that a ruler was justified in exercising political power only if it contributed to the common good of the people he served. The ethical side of a prince’s activity—how a ruler ought to behave based
on Christian moral principles—was the focus of many late medieval treatises on politics. Machiavelli bluntly contradicted this approach:

My hope is to write a book that will be useful, at least to those who read it intelligently, and so I thought it sensible to go straight to a discussion of how things are in real life and not waste time with a discussion of an imaginary world. . . . For the gap between how people actually behave and how they ought to behave is so great that anyone who ignores everyday reality in order to live up to an ideal will soon discover he has been taught how to destroy himself, not how to preserve himself.10

Machiavelli considered his approach far more realistic than that of his medieval forebears.

In Machiavellii’s view, a prince’s attitude toward power must be based on an understanding of human nature, which he perceived as basically self-centered: “For of men one can, in general, say this: They are ungrateful, fickle, deceptive and deceiving, avoiders of danger, eager to gain.” Political activity, therefore, could not be restricted by moral considerations. The prince acts on behalf of the state and for the sake of the state must be willing to let his conscience sleep. As Machiavelli put it:

You need to understand this: A ruler, and particularly a ruler who is new to power, cannot conform to all those rules that men who are thought good are expected to respect, for he is often obliged, in order to hold on to power, to break his word, to be uncharitable, inhumane, and irreligious. So he must be mentally prepared to act as circumstances and changes in fortune require. As I have said, he should do what is right if he can; but he must be prepared to do wrong if necessary.11

Machiavelli found a good example of the new Italian ruler in Cesare Borgia, the son of Pope Alexander VI, who used ruthless measures to achieve his goal of carving out a new state in central Italy. As Machiavelli said: “So anyone who decides that the policy to follow when one has newly acquired power is to destroy one’s enemies, to secure some allies, to win wars, whether by force or by fraud, to make oneself both loved and feared by one’s subjects, . . . cannot hope to find, in the recent past, a better model to imitate than Cesare Borgia.”12 Machiavelli was among the first to abandon morality as the basis for the analysis of political activity (see the box on p. 353).

**The Intellectual Renaissance in Italy**

**FOCUS QUESTION:** What was humanism, and what effect did it have on philosophy, education, attitudes toward politics, and the writing of history?

**Individualism** and **secularism**—two characteristics of the Italian Renaissance—were most noticeable in the intellectual and artistic realms. Italian culture had matured by the fourteenth century. For the next two centuries, Italy was the cultural leader of Europe. This new Italian culture was primarily the product of a relatively wealthy, urban lay society. The most important literary movement associated with the Renaissance was **humanism**.

**Italian Renaissance Humanism**

Renaissance humanism was an intellectual movement based on the study of the Classical literary works of Greece and Rome. Humanists examined the *studia humanitatis* (“the studies of humanity”)—grammar, rhetoric, poetry, moral philosophy or ethics, and history—all based on the writings of ancient Greek and Roman authors. These are the subjects we call the humanities.

The central importance of literary preoccupations in Renaissance humanism is evident in the professional status or occupations of the humanists. Some of them were teachers of the humanities in secondary schools and universities, where they either gave occasional lectures or held permanent positions, often as professors of rhetoric. Others served as secretaries in the chancelleries of Italian city-states or at the courts of princes or popes. All of these occupations were largely secular, and most humanists were laymen rather than members of the clergy.

**THE EMERGENCE OF HUMANISM** Petrarch (1304–1374) has often been called the father of Italian Renaissance humanism (see Chapter 11 on his use of the Italian vernacular). Petrarch rejected his father’s desire that he become a lawyer and took up a literary career instead. Although he lived in Avignon for a time, most of his last decades were spent in Italy as the guest of various princes and city governments. With his usual lack of modesty, Petrarch once exclaimed, “Some of the greatest kings of our time have loved me and cultivated my friendship. . . . When I was their guest it was more as if they were mine.”13

Petrarch did more than any other individual in the fourteenth century to foster the development of Renaissance humanism. He was the first intellectual to characterize the Middle Ages as a period of darkness, promoting the mistaken belief that medieval culture was ignorant of Classical antiquity. Petrarch’s interest in the classics led him on a quest for forgotten Latin manuscripts and set in motion a ransacking of monastic libraries throughout Europe. In his preoccupation with the classics and their secular content, Petrarch worried at times whether he was sufficiently attentive to spiritual ideals (see the box on p. 354). His qualms, however, did not prevent him from inaugurating the humanist emphasis on the use of pure Classical Latin, making it fashionable for humanists to use Cicero as a model for prose and Virgil for poetry. As Petrarch said, “Christ is my God; Cicero is the prince of the language.”

**HUMANISM IN FIFTEENTH-CENTURY ITALY** In Florence, the humanist movement took a new direction at the beginning of the fifteenth century when it became closely tied to Florentine civic spirit and pride, giving rise to what one modern scholar has labeled **civic humanism**. Fourteenth-century humanists such as Petrarch had described the
At the beginning of the sixteenth century, two writers produced very different views of political power and how a ruler should conduct affairs of state. In 1513, Niccolo Machiavelli wrote a short treatise on political power that, justly or unjustly, has given him a reputation as a political opportunist. In this selection from Chapter 17 of *The Prince*, Machiavelli analyzes whether it is better for a ruler to be loved than to be feared. Three years later the Dutch intellectual Erasmus, leader of the Christian humanists (see Chapter 13), also wrote a treatise on political power, entitled *Education of a Christian Prince*. As is evident in this excerpt from his treatise, Erasmus followed in the footsteps of medieval theorists on power by insisting that a true prince should think only of his moral obligations to the people he rules.

**Machiavelli, *The Prince* (1513)**

This leads us to a question that is in dispute: Is it better to be loved than feared, or vice versa? My reply is one ought to be both loved and feared; but, since it is difficult to accomplish both at the same time, I maintain it is much safer to be feared than loved, if you have to do without one of the two. For of men one can, in general, say this: They are ungrateful, fickle, deceptive and deceiving, avoiders of danger, eager to gain. As long as you serve their interests, they are devoted to you. They promise you their blood, their possessions, their lives, and their children, as I said before, so long as you seem to have no need of them. But as soon as you need help, they turn against you. Any ruler who relies simply on their promises and makes no other preparations, will be destroyed. For you will find that those whose support you buy, who do not rally to you because they admire your strength of character and nobility of soul, these are people you pay for, but they are never yours, and in the end you cannot get the benefit of your investment. Men are less nervous of offending someone who makes himself lovable, than someone who makes himself frightening. For love attaches men by ties of obligation, which, since men are wicked, they break whenever their interests are at stake. But fear restrains men because they are afraid of punishment, and this fear never leaves them. Still, a ruler should make himself feared in such a way that, if he does not inspire love, at least he does not provoke hatred. For it is perfectly possible to be feared and not hated. You will only be hated if you seize the property or the women of your subjects and citizens. Whenever you have to kill someone, make sure that you have a suitable excuse and an obvious reason; but, above all else, keep your hands off other people’s property; for men are quicker to forget the death of their father than the loss of their inheritance. Moreover, there are always reasons why you might want to seize people’s property; and he who begins to live by plundering others will always find an excuse for seizing other people’s possessions; but there are fewer reasons for killing people, and one killing need not lead to another.

When a ruler is at the head of his army and has a vast number of soldiers under his command, then it is absolutely essential to be prepared to be thought cruel; for it is impossible to keep an army united and ready for action without acquiring a reputation for cruelty.

**Erasmus, *Education of a Christian Prince* (1516)**

Follow the right, do violence to no one, plunder no one, sell no public office, be corrupted by no bribes. As you would rather stand for an injury than avenge it at great loss to the state, perchance you will lose a little something of your empire. Bear that; consider that you have gained a great deal because you have brought hurt to fewer than you would otherwise have done. If you cannot defend your realm without violating justice, without wanton loss of human life, without great loss to religion, give up and yield to the importunities of the age!

A good prince . . . is a living likeness of God, who is at once good and powerful. His goodness makes him want to help all; his power makes him able to do so. On the other hand, an evil prince, who is like a plague to his country, is the incarnation of the devil, who has great power joined with his wickedness. All his resources to the very last, he uses for the undoing of the human race.

[A good prince is one] who holds the life of each individual dearer than his own; who works and strives night and day for just one end—to be the best he can for everyone; with whom rewards are ready for all good men . . . for so much does he want to be of real help to his people, without thought of recompense, that if necessary he would not hesitate to look out for their welfare at great risk to himself; who considers his wealth to lie in the advantage of his country; who is ever on the watch so that everyone else may sleep deeply; who grants no leisure to himself so that he may spend his life in the peace of his country; who worries himself with continual cares so that his subjects may have peace and quiet. 

He does everything and allows everything that will bring everlasting peace to his country, for he realizes that war is the source of all misfortunes to the state.

**Q** What does Machiavelli have to say about being loved rather than feared? How does this view contrast with that of Erasmus on the characteristics of a good ruler? Which viewpoint do you consider more modern? Why? Which viewpoint do you think is correct? Why?
Petrarch: Mountain Climbing and the Search for Spiritual Contentment

Petrarch has long been regarded as the father of Italian Renaissance humanism. One of his literary masterpieces was *The Ascent of Mount Ventoux*, a colorful description of his attempt to climb a mountain in Provence in southern France and survey the world from its top. Petrarch’s primary interest is in presenting an allegory of his own soul’s struggle to achieve a higher spiritual state. The work is addressed to a professor of theology in Paris who had initially encouraged Petrarch to read Augustine. The latter had experienced a dramatic conversion to Christianity almost a thousand years earlier.

**Petrarch, The Ascent of Mount Ventoux**

Today I ascended the highest mountain in this region, which, not without cause, they call the Windy Peak. Nothing but the desire to see its conspicuous height was the reason for this undertaking. For many years I have been intending to make this expedition. You know that since my early childhood, as fate tossed around human affairs, I have been tossed around in these parts, and this mountain, visible far and wide from everywhere, is always in your view. So I was at last seized by the impulse to accomplish what I had always wanted to do. . . .

[After some false starts, Petrarch finally achieves his goal and arrives at the top of Mount Ventoux.]

I was glad of the progress I had made, but I wept over my imperfection and was grieved by the fickleness of all that men do. In this manner I seemed to have over my imperfection and was grieved by the fickleness of all that men do. In this manner I seemed to have
ing my imperfection and was grieved by the fickleness of all that men do. In this manner I seemed to have
ning my imperfection and was grieved by the fickleness of all that men do. In this manner I seemed to have

Q: What about his own intellectual pursuits troubled Petrarch? How does the conflict within Petrarch reflect the historical debate about the nature of the Renaissance?

I admired every detail, now relishing earthly enjoyment, now lifting up my mind to higher spheres after the example of my body, and I thought it fit to look in the volume of Augustine’s *Confessions* which I owe to your loving kindness and preserve carefully, keeping it always in my hands, in remembrance of the author as well as the donor. . . . I opened it with the intention of reading whatever might occur to me first: . . . I happened to hit upon the tenth book of the work. . . . Where I fixed my eyes first, it was written: “And men go to admire the high mountains, the vast floods of the sea, the huge streams of the rivers, the circumference of the ocean, and the revolutions of the stars—and desert themselves.” I was stunned, I confess. I bade my brother [who had accompanied him], who wanted to hear more, not to molest me, and closed the book, angry with myself that I still admired earthly things. Long since I ought to have learned, even from pagan philosophers, that “nothing is admirable besides the soul; compared to its greatness nothing is great.”

I was completely satisfied with what I had seen of the mountain and turned my inner eye toward myself. From this hour nobody heard me say a word until we arrived at the bottom. These words occupied me sufficiently. I could not imagine that this had happened to me by chance: I was convinced that whatever I had read there was said to me and to nobody else. I remembered that Augustine once suspected the same regarding himself, when, while he was reading the Apostolic Epistles, the first passage that occurred to him was, as he himself relates: “Not in banqueting and drunkenness, not in chambering and wantonness, not in strife and envying; but put you on the Lord Jesus Christ, and make no provision for the flesh to fulfill your lusts.”

intellectual life as one of solitude. They rejected family and a life of action in the community. In the busy civic world of Florence, however, intellectuals began to take a new view of their role as intellectuals. The Classical Roman Cicero, who was both a statesman and an intellectual, became their model. Leonardo Bruni (1370–1444), a humanist, Florentine patriot, and chancellor of the city, wrote a biography of Cicero titled *The New Cicero*, in which he waxed enthusiastic about the fusion of political action and literary creation in Cicero’s life. From Bruni’s time on, Cicero served as the inspiration for the Renaissance ideal that it was the duty of an intellectual to live an active life for one’s state. An individual only “grows to maturity—both intellectually and morally—through participation” in the life of the state. Civic humanism reflected the values of the urban society of the Italian Renaissance. Humanists came to believe that their study of the humanities should be put to the service of the state. It is no accident that humanists served the state as chancellors, councillors, and advisers.

Also evident in the humanism of the first half of the fifteenth century was a growing interest in Classical Greek civilization. One of the first Italian humanists to gain a
thorough knowledge of Greek was Leonardo Bruni, who became an enthusiastic pupil of the Byzantine scholar Manuel Chrysoloras, who taught in Florence from 1396 to 1400. Humanists eagerly perused the works of Plato as well as those of Greek poets, dramatists, historians, and orators, such as Euripides, Sophocles, and Thucydides, all of whom had been ignored by the scholastics of the High Middle Ages as irrelevant to the theological questions they were examining.

By the fifteenth century, a consciousness of being humanists had emerged. This was especially evident in the career of Lorenzo Valla (1407–1457). Valla was brought up in Rome and educated in both Latin and Greek. Eventually, he achieved his chief ambition of becoming a papal secretary. Valla’s major work, The Elegances of the Latin Language, was an effort to purify medieval Latin and restore Latin to its proper position over the vernacular. The treatise examined the proper use of Classical Latin and created a new literary standard. Early humanists had tended to take as Classical models any author (including Christians) who had written before the seventh century C.E. Valla identified different stages in the development of the Latin language and accepted only the Latin of the last century of the Roman Republic and the first century of the empire.

HUMANISM AND PHILOSOPHY In the second half of the fifteenth century, a dramatic upsurge of interest in the works of Plato occurred, especially evident among the members of an informal discussion group known as the Florentine Platonic Academy. Cosimo de’ Medici, the de facto ruler of Florence, became its patron and commissioned a translation of Plato’s dialogues by Marsilio Ficino (mar-SIL-yoh fee-CHEE-noh) (1433–1499), one of the academy’s leaders. Ficino dedicated his life to the translation of Plato and the exposition of the Platonic philosophy known as Neoplatonism.

In two major works, Ficino undertook the synthesis of Christianity and Platonism into a single system. His Neoplatonism was based on two primary ideas, the Neoplatonic hierarchy of substances and a theory of spiritual love. The former postulated the idea of a hierarchy of substances, or great chain of being, from the lowest form of physical matter (plants) to the purest spirit (God), in which humans occupied a central or middle position. They were the link between the material world (through the body) and the spiritual world (through the soul), and their highest duty was to ascend toward that union with God that was the true end of human existence. Ficino’s theory of spiritual or Platonic love maintained that just as all people are bound together in their common humanity by love, so too are all parts of the universe held together by bonds of sympathetic love.

RENAISSANCE HERMETICISM Hermeticism was another product of the Florentine intellectual environment of the late fifteenth century. At the request of Cosimo de’ Medici, Ficino translated into Latin a Greek work titled Corpus Hermeticum (KOR-pus hur-MET-i-koom). The Hermetic manuscripts contained two kinds of writings. One type stressed the occult sciences, with an emphasis on astrology, alchemy, and magic. "nuggets of universal truth" that he believed were all part of God’s revelation to humanity. In the Oration (see the box on p. 356), Pico offered a ringing statement of unlimited human potential: “To him it is granted to have whatever he chooses, to be whatever he wills.” Like Ficino, Pico took an avid interest in Hermetic philosophy, accepting it as the “science of the Divine,” which “embraces the deepest contemplation of the most secret things, and at last the knowledge of all nature.”

Education in the Renaissance

The humanist movement had a profound effect on education. Renaissance humanists believed that human beings could be dramatically changed by education. They wrote books on education and developed secondary schools based on their ideas. Most famous was the school founded in 1423 by Vittorino da Feltre at Mantua, where the ruler of that small Italian state, Gian Francesco I Gonzaga, wished to provide a humanist education for his children. Vittorino based much of his educational system on the ideas of Classical authors, particularly Cicero and Quintilian.

At the core of the academic training Vittorino offered were the “liberal studies.” The Renaissance view of the value of the liberal arts was most strongly influenced by a treatise on education called Concerning Character by Pietro Paolo Vergerio (PYAY-troh POW-loh vur-JEER-ee-oh) (1370–1444). This work stressed the importance of liberal studies as the key to true freedom, enabling individuals to reach their full potential. According to Vergerio, “We call those studies liberal which are worthy...
Pico della Mirandola and the Dignity of Man

Giovanni Pico della Mirandola was one of the foremost intellects of the Italian Renaissance. Pico boasted that he had studied all schools of philosophy, which he tried to demonstrate by drawing up nine hundred theses for public disputation at the age of twenty-four. As a preface to his theses, he wrote his famous Oration on the Dignity of Man, in which he proclaimed the unlimited potentiality of human beings.

Pico della Mirandola, Oration on the Dignity of Man

At last the best of artisans [God] ordained that that creature to whom He had been able to give nothing proper to himself should have joint possession of whatever had been peculiar to each of the different kinds of being. He therefore took man as a creature of indeterminate nature, and assigning him a place in the middle of the world, addressed him thus: “Neither a fixed abode nor a form that is yours alone nor any function peculiar to yourself have we given you, Adam, to the end that according to your longing and according to your judgment you may have and possess what abode, what form, and what functions you yourself desire. The nature of all other beings is limited and constrained within the bounds of laws prescribed by Us. You, constrained by no limits, in accordance with your own free will, in whose hand We have placed you, shall ordain for yourself the limits of your nature. We have set you at the world’s center that you may from there more easily observe whatever is in the world. We have made you neither of heaven nor of earth, neither mortal nor immortal, so that with freedom of choice and with honor, as though the maker and molder of yourself, you may fashion yourself in whatever shape you shall prefer. You shall have the power to degenerate into the lower forms of life, which are brutish. You shall have the power, out of your soul’s judgment, to be reborn into the higher forms, which are divine.”

O supreme generosity of God the Father, O highest and most marvelous felicity of man! To him it is granted to have whatever he chooses, to be whatever he wills. Beasts as soon as they are born bring with them from their mother’s womb all they will ever possess. Spiritual beings, either from the beginning or soon thereafter, become what they are to be for ever and ever. On man when he came into life the Father conferred the seeds of all kinds and the germs of every way of life. Whatever seeds each man cultivates will grow to maturity and bear in him their own fruit. If they be vegetative, he will be like a plant. If sensitive, he will become brutish. If rational, he will grow into a heavenly being. If intellectual, he will be an angel and the son of God.

Q What did Pico mean by the “dignity of man”? Why would Pico be regarded as one of the Renaissance magi?

A Woman’s Defense of Learning

As a young woman, Laura Cereta was proud of her learning but condemned by a male world that found it unseemly for women to be scholars. One monk said to her father, “She gives herself to things unworthy of her—namely, the classics.” Before being silenced, Laura Cereta wrote a series of letters, including one to a male critic who had argued that her work was so good it could not have been written by a woman.

Laura Cereta, Defense of the Liberal Instruction of Women

My ears are wearied by your carping. You brashly and publicly not merely wonder but indeed lament that I am said to possess as fine a mind as nature ever bestowed upon the most learned man. You seem to think that so learned a woman has scarcely before been seen in the world. You are wrong on both counts. . . .

I would have been silent. . . . But I cannot tolerate your having attacked my entire sex. For this reason my thirsty soul seeks revenge, my sleeping pen is aroused to literary struggle, raging anger stirs mental passions long chained by silence. With just cause I am moved to demonstrate how great a reputation for learning and virtue women have won by their inborn excellence, manifested in every age as knowledge. . . .

Only the question of the rarity of outstanding women remains to be addressed. The explanation is clear: women have been able by nature to be exceptional, but have chosen lesser goals. For some women are concerned with parting their hair correctly, adorning themselves with lovely dresses, or decorating their fingers with pearls and other gems. Others delight in mouthing carefully composed phrases, indulging in dancing, or managing spoiled puppies. Still others wish to gaze at mirrors, to smear their lovely faces. But those in whom a deeper integrity yearns for virtue, restrain from the start their youthful souls, reflect on higher things, harden the body with sobriety and trials, and curb their tongues, open their ears, compose their thoughts in wakeful hours, their minds in contemplation, to letters bonded to righteousness. For knowledge is not given as a gift, but [is gained] with diligence. The free mind, not shirking effort, always soars zealously toward the good, and the desire to know grows ever more wide and deep. It is because of no special holiness, therefore, that we [women] are rewarded by God the Giver with the gift of exceptional talent. Nature has generously lavished its gifts upon all people, opening to all the doors of choice through which reason sends envoys to the will, from which they learn and convey its desires. The will must choose to exercise the gift of reason. . . .

I have been praised too much; showing your contempt for women, you pretend that I alone am admirable because of the good fortune of my intellect. . . . Do you suppose, O most contemptible man on earth, that I think myself sprung [like Athena] from the head of Jove? I am a school girl, possessed of the sleeping embers of an ordinary mind. Indeed I am too hurt, and my mind, offended, too swayed by passions, sighs, tormenting itself, conscious of the obligation to defend my sex. For absolutely everything—that which is within us and that which is without—is made weak by association with my sex. F

How did Cereta explain her intellectual interests and accomplishments? Why were Renaissance women rarely taken seriously when they sought educational opportunities and recognition for their intellectual talents? Were any of those factors unique to the Renaissance era?

provided the model for the basic education of the European ruling classes until the twentieth century.

Humanism and History

Humanism had a strong impact on the writing of history. Influenced by Roman and Greek historians, the humanists approached the writing of history differently from the chroniclers of the Middle Ages. The humanists’ belief that Classical civilization had been followed by an age of barbarism (the Middle Ages), which had in turn been succeeded by their own age, with its rebirth of the study of the classics, enabled them to think in terms of the passage of time, of the past as past. Their division of the past into ancient world, dark ages, and their own age provided a new sense of chronology or periodization in history. The humanists were also responsible for secularizing the writing of history. Humanist historians reduced or eliminated the role of miracles in historical interpretation, not because they were anti-Christian but because they took a new approach to sources. They wanted to use documents and exercised their newly developed critical skills in examining them. Greater attention was paid to the political events and forces that affected their city-states or larger territorial units. Thus, Leonardo Bruni wrote the History of the Florentine People. The new emphasis on secularization was also evident in the humanists’ conception of causation in history. Medieval historical literature often portrayed historical events as being caused by God’s active involvement in human affairs. Humanists de-emphasized divine intervention in favor of human motives, stressing political forces or the role of individuals in history.
GUICCIARDINI | The high point of Renaissance historiography was achieved at the beginning of the sixteenth century in the works of Francesco Guicciardini (frahn-cheESS-koh gwee-char-DEE-nee) (1483–1540). He has been called by some Renaissance scholars the greatest historian between Tacitus in the first century (see Chapter 6) and Voltaire and Gibbon in the eighteenth century (see Chapter 17). His History of Italy and History of Florence represent the beginning of “modern analytical historiography.” To Guicciardini, the purpose of writing history was to teach lessons, but he was so impressed by the complexity of historical events that he felt those lessons were not always obvious. From his extensive background in government and diplomatic affairs, he developed the skills that enabled him to analyze political situations precisely and critically. Emphasizing political and military history, his works relied heavily on personal examples and documentary sources.

The Impact of Printing

The Renaissance witnessed the invention of printing, one of the most important technological innovations of Western civilization. The art of printing made an immediate impact on European intellectual life and thought. Printing from hand-carved wooden blocks had been done in the West since the twelfth century and in China even before that. What was new to Europe in the fifteenth century was multiple printing with movable metal type. The development of printing from movable type was a gradual process that culminated between 1445 and 1450; Johannes Gutenberg (yoh-HAH-nuss GOO-ten-bayrk) of Mainz played an important role in bringing the process to completion. Gutenberg’s Bible, completed in 1455 or 1456, was the first true book in the West produced from movable type.

The new printing spread rapidly throughout Europe in the second half of the fifteenth century. Printing presses were established throughout the Holy Roman Empire in the 1460s and within ten years had spread to Italy, England, France, the Low Countries, Spain, and eastern Europe. Especially well known as a printing center was Venice, home by 1500 to almost one hundred printers who had produced almost 2 million volumes.

By 1500, there were more than a thousand printers in Europe who had published almost 40,000 titles (between 8 million and 10 million copies). Probably 50 percent of these books were religious—Bibles and biblical commentaries, books of devotion, and sermons. Next in importance were the Latin and Greek classics, medieval grammars, legal handbooks, works on philosophy, and an ever-growing number of popular romances.

Printing became one of the largest industries in Europe, and its effects were soon felt in many areas of European life. The printing of books encouraged the development of scholarly research and the desire to attain knowledge. Moreover, printing facilitated cooperation among scholars and helped produce standardized and definitive texts. Printing also stimulated the development of an ever-expanding lay reading public, a development that had an enormous impact on European society. Indeed, without the printing press, the new religious ideas of the Reformation would never have spread as rapidly as they did in the sixteenth century.

The Artistic Renaissance

FOCUS QUESTION: What were the chief characteristics of Renaissance art, and how did it differ in Italy and northern Europe?

Leonardo da Vinci, one of the great Italian Renaissance artists, once explained: “Hence the painter will produce pictures of small merit if he takes for his standard the pictures of others, but if he will study from natural objects he will bear good fruit. . . . Those who take for their standard any one but nature . . . weary themselves in vain.”

Renaissance artists considered the imitation of nature their primary goal. Their search for naturalism became an end in itself: to persuade onlookers of the reality of the object or event they were portraying. At the same time, the new artistic standards reflected a new attitude of mind as well, one in which human beings became the focus of attention, the “center and measure of all things,” as one artist proclaimed.

Art in the Early Renaissance

Leonardo and other Italians maintained that it was Giotto in the fourteenth century (see Chapter 11) who began the imitation of nature. But what Giotto had begun was not taken up again until the work of Masaccio (muh-ZAH-choh) (1401–1428) in Florence. Masaccio’s cycle of frescoes in the Brancacci Chapel has long been regarded as the first masterpiece of Early Renaissance art. With his use of monumental figures, a more realistic relationship between figures and landscape, and visual representation of the laws of perspective, a new realistic style of painting was born. Onlookers become aware of a world of reality that appears to be a continuation of their own world. Masaccio’s massive, three-dimensional human figures provided a model for later generations of Florentine artists.

This new Renaissance style was absorbed and modified by other Florentine painters in the fifteenth century. Especially important was the development of an experimental trend that took two directions. One emphasized the mathematical side of painting, the working out of the laws of perspective and the organization of outdoor space and light by geometry and perspective. In the work of Paolo Uccello (POW-loh oo-CHELL-oh) (1397–1475), figures became mere stage props to show off his mastery of the laws of perspective. The other aspect of the experimental trend involved the investigation of movement and anatomical structure. The Martyrdom of Saint Sebastian by Antonio Pollaiuolo (pohl-ly-WOH-loh) (c. 1432–1498) reveals in Classical motifs and attempts to portray the human body under stress. Indeed, the realistic portrayal of
the human nude became one of the foremost preoccupations of Italian Renaissance art. The fifteenth century, then, was a period of experimentation and technical mastery.

During the last decades of the fifteenth century, a new sense of invention emerged in Florence, especially in the circle of artists and scholars who formed part of the court of the city's leading citizen, Lorenzo the Magnificent. One of this group's prominent members was Sandro Botticelli (SAHN-droh bot-i-CHELL-ee) (1445–1510), whose interest in Greek and Roman mythology was well reflected in one of his most famous works, *Primavera* (Spring). The painting is set in the garden of Venus, a garden of eternal spring. Though Botticelli's figures are well defined, they also possess an otherworldly quality that is far removed from the realism that characterized the painting of the Early Renaissance.

The revolutionary achievements of Florentine painters in the fifteenth century became one of the foremost preoccupations of Italian Renaissance art. The fifteenth century, then, was a period of experimentation and technical mastery.

The revolutionary achievements of Florentine painters in the fifteenth

*Masaccio, Tribute Money.* With the frescoes of Masaccio, regarded by many as the first great works of Early Renaissance art, a new realistic style of painting was born. *Tribute Money* was one of a series of frescoes that Masaccio painted in the Brancacci Chapel of the Church of Santa Maria del Carmine in Florence. In *Tribute Money,* Masaccio illustrated the biblical story of Jesus's confrontation by a tax collector at the entrance to the town of Capernaum (seen at center). Jesus sent Peter to collect a coin from the mouth of a fish from Lake Galilee (seen at left); Peter then paid the tax collector (seen at right). In illustrating this story from the Bible, Masaccio used a rational system of perspective to create a realistic relationship between the figures and their background; the figures themselves are realistic. As one Renaissance observer said, "The works made before Masaccio's day can be said to be painted, while his are living, real, and natural."

*The Artistic Renaissance*
century were matched by equally stunning advances in sculpture and architecture. Donato di Donatello (doh-NAH-toh dee doh-NUH-TELL-oh) (1386–1466) spent time in Rome studying and copying the statues of antiquity. His subsequent work in Florence reveals how well he had mastered the essence of what he saw. Among his numerous works was a statue of David, which is the first known life-size, freestanding bronze nude in European art since antiquity. With the severed head of the giant Goliath beneath David’s feet, Donatello’s statue may have celebrated Florentine heroism in the triumph of Florence over Milan in 1428. David’s pose and appearance are reminiscent of the nude statues of antiquity.

Donatello, David. Donatello’s David first stood in the courtyard of the Medici Palace. On its base was an inscription praising Florentine heroism and virtue, leading art historians to believe that the statue was meant to commemorate the victory of Florence over Milan in 1428. David’s pose and appearance are reminiscent of the nude statues of antiquity.

Filippo Brunelleschi (fee-LEE-poh BROO-nuh-LESS-kee) (1377–1446), a friend of Donatello’s, accompanied the latter to Rome. Brunelleschi drew much inspiration from the architectural monuments of Roman antiquity, and when he returned to Florence, he poured his new insights into the creation of a new architecture. His first project involved the challenge of building a dome for the unfinished cathedral of Florence (the Duomo). The cathedral had been started in 1296, but it was Brunelleschi who devised new building techniques and machinery to create a dome, built between 1420 and 1436, that spanned a 140-foot opening.

An even better example of Brunelleschi’s new Renaissance architectural style is evident in the Church of San Lorenzo. When the Medici commissioned him to design the church, Brunelleschi, inspired by Roman models, created a church interior very different from that of the great medieval cathedrals. San Lorenzo’s Classical columns, rounded arches, and coffered ceiling created an environment that did not overwhelm the worshiper materially and psychologically, as Gothic cathedrals did, but comforted as a space created to fit human, not divine, measurements. Like painters and sculptors, Renaissance architects sought to reflect a human-centered world.

The new assertion of human individuality, evident in Early Renaissance art, was also reflected in the new emphasis on portraiture. Patrons appeared in the corners of sacred pictures, and monumental tombs and portrait statues honored many of Florence’s prominent citizens. By the mid-fifteenth century, artists were giving an accurate rendering of their subjects’ facial features while revealing the
inner qualities of their personalities. The portraits of
the duke and duchess of Urbino by Piero della Francesca
(c. 1410–1492) provide accurate representations as well as
a sense of both the power and the wealth of the rulers of
Urbino (see p. 349).

The Artistic High Renaissance
By the end of the fifteenth century, Italian painters,
sculptors, and architects had created a new artistic envi-
ronment. Many artists had mastered the new techniques
for a scientific observation of the world around them and
were now ready to move into individualistic forms of
creative expression. This final stage of Renaissance art,
which flourished between 1480 and 1520, is called the
High Renaissance. The shift to the High Renaissance was
marked by the increasing importance of Rome as a new
cultural center of the Italian Renaissance.

The High Renaissance was dominated by the work of
three artistic giants: Leonardo da Vinci (1452–1519),
Raphael (1483–1520), and Michelangelo (1475–1564).
Leonardo represents a transitional figure in the shift to
High Renaissance principles. He carried on the fifteenth-century experimental tradition by studying everything and even dissecting human bodies to see more clearly how nature worked. But Leonardo stressed the need to advance beyond such realism and initiated the High Renaissance’s preoccupation with the idealization of nature, or the attempt to generalize from realistic portrayal to an ideal form. Leonardo’s *Last Supper*, painted in Milan, is a brilliant summary of fifteenth-century trends in its organization of space and use of perspective to depict subjects three-dimensionally in a two-dimensional medium. But it is also more. The figure of Philip is idealized, and the work embodies profound psychological dimensions. The words of Jesus that “one of you shall betray me” are experienced directly as each of the apostles reveals his personality and his relationship to Jesus. Through gestures and movement, Leonardo hoped to reveal a person’s inner life.

Raphael (RAFF-ee-ul) blossomed as a painter at an early age; at twenty-five, he was already regarded as one of Italy’s best painters. Raphael was acclaimed for his numerous madonnas, in which he attempted to achieve an ideal of beauty far surpassing human standards. He is well known for his frescoes in the Vatican Palace; his *School of Athens* reveals a world of balance, harmony, and order—the underlying principles of the art of the Classical world of Greece and Rome.

Michelangelo (my-kuh-LAN-juh-loh), an accomplished painter, sculptor, and architect, was another giant of the High Renaissance. Fiercely driven by his desire to create, he worked with great passion and energy on a remarkable number of projects. Michelangelo was influenced by Neoplatonism, especially evident in his figures on the ceiling of the Sistine Chapel in Rome. In 1508, Pope Julius II had called Michelangelo to Rome and commissioned him to decorate the chapel ceiling. This colossal project was not completed until 1512. Michelangelo attempted to tell the story of the Fall of Man by depicting nine scenes...
from the biblical book of Genesis. In his *Creation of Adam* (reproduced at the start of this chapter), the well-proportioned figure of Adam awaits the divine spark. Adam, like the other muscular figures on the ceiling, reveals an ideal type of human being with perfect proportions. In good Neoplatonic fashion, the beauty of these figures is meant to be a reflection of divine beauty; the more beautiful the body, the more God-like the figure.

Another manifestation of Michelangelo’s search for ideal beauty was his *David*, a colossal marble statue commissioned by the Florentine government in 1501 and completed in 1504. Michelangelo maintained that the form of a statue already resided in the uncarved piece of stone: “I only take away the surplus, the statue is already there.”20 Out of a piece of marble that had remained unused for fifty years, Michelangelo created a 14-foot-high figure, the largest sculpture in Italy since the time of Rome. An awe-inspiring hero, Michelangelo’s *David* proudly proclaims the beauty of the human body and the glory of human beings.

The High Renaissance was also evident in architecture, especially in the work of Donato Bramante (doh-NAH-toh brah-MAHN-tay) (1444–1514). He came from Urbino but took up residence in Rome, where he designed a small temple on the supposed site of Saint Peter’s martyrdom. The Tempietto, or little temple, with its Doric columns surrounding a sanctuary enclosed by a dome, summarized the architectural ideals of the High Renaissance. Columns, dome, and sanctuary form a monumental and harmonious whole. Inspired by antiquity, Bramante had recaptured the grandeur of ancient Rome. His achievement led Pope Julius II to commission him to design a new basilica for Rome, which eventually became the magnificent Saint Peter’s.

The Artist and Social Status

Early Renaissance artists began their careers as apprentices to masters in craft guilds. Apprentices with unusual talent might eventually become masters and run their own workshops. As in the Middle Ages, artists were still largely viewed as artisans. Since guilds depended on commissions for their projects, patrons played an important role in the art of the Early Renaissance. The wealthy
The Genius of Leonardo da Vinci

During the Renaissance, artists came to be viewed as creative geniuses with almost divine qualities. One individual who helped create this image was himself a painter. Giorgio Vasari was an avid admirer of Italy’s great artists and wrote a series of brief biographies of them. This excerpt is taken from his account of Leonardo da Vinci.

Giorgio Vasari, Lives of the Artists

In the normal course of events many men and women are born with various remarkable qualities and talents; but occasionally, in a way that transcends nature, a single person is marvelously endowed by heaven with beauty, grace, and talent in such abundance that he leaves other men far behind, all his actions seem inspired, and indeed everything he does clearly comes from God rather than from human art.

Everyone acknowledged that this was true of Leonardo da Vinci, an artist of outstanding physical beauty who displayed infinite grace in everything he did and who cultivated his genius so brilliantly that all problems he studied he solved with ease. He possessed great strength and dexterity; he was a man of regal spirit and tremendous breadth of mind; and his name became so famous that not only was he esteemed during his lifetime but his reputation endured and became even greater after his death.

He was marvelously gifted, and he proved himself to be a first-class geometrician in his work as a sculptor and architect. In his youth Leonardo made in clay several heads of women, with smiling faces, of which plaster casts are still being made, as well as some children’s heads executed as if by a mature artist. He also did many architectural drawings both of ground plans and of other elevations, and, while still young, he was the first to propose reducing the Arno River to a navigable canal between Pisa and Florence. He made designs for mills, fulling machines, and engines that could be driven by waterpower; and as he intended to be a painter by profession he carefully studied drawing from life. Altogether, his genius was so wonderfully inspired by the grace of God, his powers of expression were so powerfully fed by a willing memory and intellect, and his writing conveyed his ideas so precisely, that his arguments and reasonings confounded the most formidable critics. In addition, he used to make models and plans showing how to excavate and tunnel through mountains without difficulty, so as to pass from one level to another; and he demonstrated how to lift and draw great weights by means of levers and hoists and ways of cleaning harbors and using pumps to suck up water from great depths.

---

Q How do you think Vasari’s comments on Leonardo fostered the image of the Renaissance artist as a “creative genius with almost divine qualities”?

upper classes determined both the content and the purpose of the paintings and pieces of sculpture they commissioned.

By the end of the fifteenth century, a transformation in the position of the artist had occurred. Especially talented individuals, such as Leonardo, Raphael, and Michelangelo, were no longer regarded as artisans but as artistic geniuses with creative energies akin to the divine (see the box above). Artists were heroes, individuals who were praised more for their creativity than for their competence as craftspeople. Michelangelo, for example, was frequently addressed as “Il Divino”—the Divine One. As society excused their eccentricities and valued their creative genius, the artists of the High Renaissance became the first to embody the modern concept of the artist.

As respect for artists grew, so did their ability to profit economically from their work and to rise on the social scale. Now welcomed as equals into the circles of the upper classes, they mingled with the political and intellectual elite of their society and became more aware of new intellectual theories, which they then embodied in their art. The Platonic Academy and Renaissance Neoplatonism had an especially important impact on Florentine painters.

The Northern Artistic Renaissance

In trying to provide an exact portrayal of their world, the artists of the north (especially the Low Countries) and Italy took different approaches. In Italy, the human form became the primary vehicle of expression as Italian artists sought to master the technical skills that allowed them to portray humans in realistic settings. The large wall spaces of Italian churches had given rise to the art of fresco painting, but in the north, the prevalence of Gothic cathedrals with their stained-glass windows resulted in more emphasis on illuminated manuscripts and wooden panel painting for altarpieces. The space available in these works was limited, and great care was required to depict each object, leading northern painters to become masters at rendering details.

The most influential northern school of art in the fifteenth century was centered in Flanders. Jan van Eyck (YAHN vahn YK or van AYK) (c. 1390–1441) was among
Van Eyck, Giovanni Arnolfini and His Bride. Northern painters took great care in depicting each object and became masters at rendering details. This emphasis on a realistic portrayal is clearly evident in this oil painting, supposedly a portrait of Giovanni Arnolfini, an Italian merchant who had settled in Bruges, and his wife, Giovanna Cenami. 

The first to use oil paint, a medium that enabled the artist to use a varied range of colors and create fine details. In the famous Giovanni Arnolfini and His Bride, van Eyck’s attention to detail is staggering: precise portraits, a glittering chandelier, and a mirror reflecting the objects in the room. Although each detail was rendered as observed, it is evident that van Eyck’s comprehension of perspective was still uncertain. His work is truly indicative of northern Renaissance painters, who, in their effort to imitate nature, did so not by mastery of the laws of perspective and proportion but by empirical observation of visual reality and the accurate portrayal of details. Moreover, northern painters placed great emphasis on the emotional intensity of religious feeling and created great works of devotional art, especially in their altarpieces. Michelangelo summarized the difference between northern and Italian Renaissance painting in these words:

In Flanders, they paint, before all things, to render exactly and deceptively the outward appearance of things. The painters choose, by preference, subjects provoking transports of piety, like the figures of saints or of prophets. But most of the time they paint what are called landscapes with plenty of figures. Though the eye is agreeably impressed, these pictures have neither choice of values nor grandeur. In short, this art is without power and without distinction; it aims at rendering minutely many things at the same time, of which a single one would have sufficed to call forth a man’s whole application.

By the end of the fifteenth century, however, artists from the north began to study in Italy and were visually influenced by what artists were doing there.

One northern artist of this later period who was greatly affected by the Italians was Albrecht Dürer (AHL-brekh Doo-rur) (1471–1528) from Nuremberg. Dürer made two trips to Italy and absorbed most of what the Italians could teach, as is evident in his mastery of the laws of perspective and Renaissance theories of proportion. He wrote detailed treatises on both subjects. At the same time, as in his famous Adoration of the Magi, Dürer did not reject the use of minute details characteristic of northern artists. He did try, however, to integrate those details more harmoniously into his works and, like the Italian artists of the High Renaissance, to achieve a standard of ideal beauty by a careful examination of the human form.

Music in the Renaissance

For much of the fifteenth century, an extraordinary cultural environment was fostered in the domains of the dukes of Burgundy in northern Europe. The court of the dukes attracted some of the best artists and musicians of the time. Among them was Guillaume Dufay (gee-YOHM doo-FAY) (c. 1400–1474), perhaps the most important composer of his era. Born in northern France, Dufay lived for a few years in Italy and was thus well suited to combine the late medieval style of France with the early Renaissance style of Italy. One of Dufay’s greatest contributions was a change in the composition of the Mass. He was the first to use secular tunes to replace Gregorian chants as the fixed melody that served as the basis for the Mass. Dufay also composed a number of secular songs, an important reminder that during the Renaissance, music ceased to be used chiefly in the service of God and moved into the secular world of courts and cities. In Italy and France, the chief form of secular music was the madrigal.

The Renaissance madrigal was a poem set to music, and its origins were in the fourteenth-century Italian courts. The texts were usually twelve-line poems written in the vernacular, and their theme was emotional or erotic love. By the mid-sixteenth century, most madrigals were written for five or six voices and employed a technique called text painting, in which the music tried to portray the literal meaning of the text. Thus, the melody would rise for the word Heaven or use a wavelike motion to represent...
the word water. By the mid-sixteenth century, the madrigal had also spread to England, where the most popular form was characterized by the fa-la-la refrain like that found in the English carol “Deck the Halls.”

The European State in the Renaissance

**FOCUS QUESTION:** Why do historians sometimes refer to the monarchies of the late fifteenth century as “new monarchies” or “Renaissance states”?

In the first half of the fifteenth century, European states continued the disintegrative patterns of the previous century. In the second half of the century, however, recovery set in, and attempts were made to reestablish the centralized power of monarchical governments. To characterize the results, some historians have used the label “Renaissance states”; others have spoken of the “new monarchies,” especially those of France, England, and Spain at the end of the fifteenth century (see Map 12.2). Although monarchs in western Europe succeeded to varying degrees at extending their political authority, rulers in central and eastern Europe were often weak and unable to impose their authority.

The Growth of the French Monarchy

The Hundred Years’ War had left France prostrate. Depopulation, desolate farmlands, ruined commerce, and independent and unruly nobles had made it difficult for the kings to assert their authority. But the war had also developed a strong degree of French national feeling toward a common enemy that the kings could use to reestablish monarchical power. The need to prosecute the war provided an excuse to strengthen the authority of the king, already evident in the policies of Charles VII (1422–1461) after he was crowned king at Reims. With the consent of the Estates-General, Charles established a royal army composed of cavalry and archers. He received from the Estates-General the right to levy the taille, an annual direct tax usually on land or property, without any need for further approval from the Estates-General. Losing control of the purse meant less power for this parliamentary body.

The process of developing a French territorial state was greatly advanced by King Louis XI (1461–1483), known as the Spider because of his wily and devious ways. By retaining the taille as a permanent tax imposed by royal authority, Louis secured a sound, regular source of income. Louis was not, however, completely successful in repressing the French nobility, whose independence posed a threat to his own state building. A major problem was his supposed vassal, Charles the Bold, duke of Burgundy (1467–1477). Charles attempted to create a middle kingdom between France and Germany, stretching from the Low Countries to Switzerland. Louis opposed his efforts, and when Charles was killed in 1477 fighting the Swiss, Louis added part of Charles’s possessions, the duchy of Burgundy, to his own lands. Three years later, the provinces of Anjou, Maine, Bar, and Provence were brought under royal control. Many historians believe that Louis created a base for the later development of a strong French monarchy.
MAP 12.2  Europe in the Second Half of the Fifteenth Century. By the second half of the fifteenth century, states in western Europe, particularly France, Spain, and England, had begun the process of modern state building. With varying success, they reined in the power of the church and nobles, increased the ability to levy taxes, and established effective government bureaucracies.

What aspects of Europe’s political boundaries help explain why France and the Holy Roman Empire were often at war with each other?

View an animated version of this map or related maps on the CourseMate website.

England: Civil War and a New Monarchy

The Hundred Years’ War had also strongly affected the other protagonist in that conflict. The cost of the war in its final years and the losses in manpower strained the English economy. Moreover, even greater domestic turmoil came to England when the War of the Roses broke out in the 1450s. This civil war pitted the ducal house of Lancaster, whose symbol was a red rose, against the ducal house of York, whose symbol was a white rose. Many aristocratic families of England were drawn into the conflict. Finally, in 1485, Henry Tudor, duke of Richmond, defeated the last Yorkist king, Richard III (1483–1485), at Bosworth Field and established the new Tudor dynasty.

As the first Tudor king, Henry VII (1485–1509) worked to reduce internal dissension and establish a strong monarchical government. Henry ended the private wars of the nobility by abolishing “livery and maintenance,” the practice by which wealthy aristocrats maintained private armies of followers dedicated to the service of their lord. Since England, unlike France and Spain, did not possess a standing army, the king relied on special commissions to trusted nobles to raise troops for a specific campaign, after which the troops were disbanded. Henry also controlled the irresponsible activity of the nobles by establishing the Court of Star Chamber, which did not use juries and allowed torture to be used to extract confessions.

Henry VII was particularly successful in extracting income from the traditional financial resources of the
English monarch, such as the crown lands, judicial fees and fines, and customs duties. By using diplomacy to avoid wars, which are always expensive, the king avoided having to call Parliament on any regular basis to grant him funds. By not overburdening the landed gentry and middle class with taxes, Henry won their favor, and they provided much support for his monarchy. Henry’s policies enabled him to leave England with a stable and prosperous government and an enhanced status for the monarchy itself.

The Unification of Spain
During the Middle Ages, several independent Christian kingdoms had emerged in the course of the long reconquest of the Iberian peninsula from the Muslims. Aragon and Castile were the strongest Spanish kingdoms; in the west was the independent monarchy of Portugal; in the north, the small kingdom of Navarre, oriented toward France; and in the south, the Muslim kingdom of Granada (see Map 12.3). Few people at the beginning of the fifteenth century could have predicted the unification of the Iberian kingdoms.

A major step in that direction was taken with the marriage of Isabella of Castile (1474–1504) and Ferdinand of Aragon (1479–1516) in 1469. This was a dynastic union of two rulers, not a political union. Both kingdoms maintained their own parliaments (Cortes), courts, laws, coinage, speech, customs, and political organs. Nevertheless, the two rulers worked to strengthen royal control of government, especially in Castile. The royal council, which was supposed to supervise local administration and oversee the implementation of government policies, was stripped of aristocrats and filled primarily with middle-class lawyers. Trained in the principles of Roman law, these officials operated on the belief that the monarchy embodied the power of the state.

Seeking to replace the undisciplined feudal levies they had inherited with a more professional royal army, Ferdinand and Isabella reorganized the military forces of Spain. The development of a strong infantry force as the heart of the new Spanish army made it the best in Europe by the sixteenth century.

Because of its vast power and wealth, Ferdinand and Isabella recognized the importance of controlling the Catholic Church. They secured from the pope the right to select the most important church officials in Spain, virtually guaranteeing the creation of a Spanish Catholic Church in which the clergy became an instrument for the extension of royal power. The monarchs also used their authority over the church to institute reform. Isabella’s chief minister, the able and astute Cardinal Ximenes (khee-MAY-ness), restored discipline and eliminated immorality among the monks and secular clergy.

The religious zeal exhibited in Cardinal Ximenes’s reform program was also evident in the policy of strict religious uniformity pursued by Ferdinand and Isabella. Of course, it served a political purpose as well: to create unity and further bolster royal power. Spain possessed two large religious minorities, the Jews and Muslims, both of which had generally been tolerated in medieval Spain. Although anti-Semitism had become a fact of life in medieval Europe, Spain had largely remained tolerant. In some areas of Spain, Jews exercised much influence in economic and intellectual affairs. During the fourteenth century, however, increased persecution led the majority of Spanish Jews to convert to Christianity. Although many of these converted Jews came to play important roles in Spanish society, complaints that they were secretly reverting to Judaism prompted Ferdinand and Isabella to ask the pope to introduce the Inquisition into Spain in 1478. Under royal control, the Inquisition worked with cruel efficiency to guarantee the orthodoxy of the converts but had no authority over practicing Jews. Consequently, in 1492,

Map 12.3 The Iberian Peninsula. The marriage of Isabella of Castile to Ferdinand of Aragon laid the foundation for the unification of Spain and its rise as a major European power. The two monarchs instituted military and bureaucratic reforms and forced Jews and Muslims to flee the country.

Q What aspects of Portugal’s geography help explain why it became a major seafaring nation, with little overland trade with Europe?
flush with the success of their conquest of Muslim Granada, Ferdinand and Isabella took the drastic step of expelling all professed Jews from Spain. It is estimated that 150,000 out of possibly 200,000 Jews fled.

Ferdinand and Isabella also pursued a policy of battling the Muslims by attacking the kingdom of Granada. The war against this remaining Muslim kingdom lasted eleven years until the final bastion of the city of Granada fell in 1492. Muslims were now “encouraged” to convert to Christianity, and in 1502, Isabella issued a decree expelling all professed Muslims from her kingdom. To a very large degree, the “Most Catholic” monarchs had achieved their goal of absolute religious orthodoxy as a basic ingredient of the Spanish state. To be Spanish was to be Catholic, a policy of uniformity enforced by the Inquisition. It was no accident that Spain would be a staunch pillar of the Catholic Church during the era of the Reformation in the sixteenth century (see Chapter 13).

The Holy Roman Empire: The Success of the Habsburgs

Unlike France, England, and Spain, the Holy Roman Empire failed to develop a strong monarchical authority. After 1438, the position of Holy Roman Emperor remained in the hands of the Habsburg dynasty. Having gradually acquired a number of possessions along the Danube, known collectively as Austria, the house of Habsburg had become one of the wealthiest landholders in the empire and by the mid-fifteenth century began to play an important role in European affairs.

Much of the Habsburg success in the fifteenth century was due not to military success but to a well-executed policy of dynastic marriages. As the old Habsburg motto said, “Leave the waging of wars to others! But you, happy Austria, marry; for the realms which Mars [god of war] awards to others, Venus [goddess of love] transfers to you.” By marrying his son Maximilian to Mary, the daughter of Duke Charles the Bold of Burgundy, Emperor Frederick III (1440–1493) gained Franche-Comté in eastern France, Luxembourg, and a large part of the Low Countries. The addition of these territories made the Habsburg dynasty an international power and brought it the undying opposition of the French monarchy because the rulers of France feared they would be surrounded by the Habsburgs.

Much was expected of the flamboyant Maximilian I (1493–1519) when he became emperor. Through the Reichstag, the imperial diet or parliament, Maximilian attempted to centralize the administration by creating new institutions common to the entire empire. Opposition from the German princes doomed these efforts, however. Maximilian’s only real success lay in his marriage alliances. Philip of Burgundy, the son of Maximilian’s marriage to Mary, was married to Joanna, the daughter of Ferdinand and Isabella. Philip and Joanna produced a son, Charles, who, through a series of unexpected deaths, became heir to all three lines, the Habsburg, Burgundian, and Spanish, making him the leading monarch of his age (see Chapter 13).

The Struggle for Strong Monarchy in Eastern Europe

In eastern Europe, rulers struggled to achieve the centralization of their territorial states but faced serious obstacles. Although the population was mostly Slavic, there were islands of other ethnic groups that caused untold difficulties. Religious differences also troubled the area, as Roman Catholics, Greek Orthodox Christians, and pagans confronted each other.

Much of Polish history revolved around a bitter struggle between the crown and the landed nobility until the end of the fifteenth century, when the preoccupation of Poland’s rulers with problems in Bohemia and Hungary, as well as war with the Russians and Turks, enabled the aristocrats to reestablish their power. Through their control of the Sejm (SAYM) or national diet, the magnates reduced the peasantry to serfdom by 1511 and established the right to elect their kings. The Polish kings proved unable to establish a strong royal authority.

Bohemia, Poland’s neighbor, was part of the Holy Roman Empire, but distrust of the Germans and close ethnic ties to the Poles and Slovaks encouraged the Czechs of Bohemia to associate with their northeastern Slavic neighbors. The Hussite wars (see “The Problems of Heresy and Reform” later in this chapter) led to further disension and civil war. Because of a weak monarchy, the Bohemian nobles increased their authority and wealth at the expense of both crown and church.

The history of Hungary had been closely tied to that of central and western Europe by its conversion to Roman Catholicism by German missionaries. The church became a large and prosperous institution. Wealthy bishops, along with the great territorial lords, became powerful, independent political figures. For a brief while, Hungary developed into an important European state, the dominant power in eastern Europe. King Matthias Corvinus (muh-THY-us kor-VY-nuss) (1458–1490) broke the power of the wealthy lords and created a well-organized bureaucracy. Like a typical Renaissance prince, he patronized the new humanist culture, brought Italian scholars and artists to his capital at Buda, and made his court one of the most brilliant outside Italy. After his death, however, Hungary returned to weak rule, and the work of Corvinus was largely undone.

Since the thirteenth century, Russia had been under the domination of the Mongols. Gradually, the princes of Moscow rose to prominence by using their close relationship to the Mongol khans to increase their wealth and expand their possessions. In the reign of the great prince Ivan III (1462–1505), a new Russian state—the principality of Moscow—was born. Ivan III annexed other Russian principalities and took advantage of dissension among the Mongols to throw off their yoke by 1480.
The Ottoman Turks and the End of the Byzantine Empire

Eastern Europe was increasingly threatened by the steadily advancing Ottoman Turks (see Map 12.4). The Byzantine Empire had, of course, served as a buffer between the Muslim Middle East and the Latin West for centuries, but it had been severely weakened by the sack of Constantinople in 1204 and its occupation by the West. Although the Palaeologus dynasty (1260–1453) had tried to reestablish Byzantine power in the Balkans after the overthrow of the Latin empire, the threat from the Turks finally doomed the long-lasting empire.

Beginning in northeastern Asia Minor in the thirteenth century, the Ottoman Turks spread rapidly, seizing the lands of the Seljuk Turks and the Byzantine Empire. In 1345, they bypassed Constantinople and moved into the Balkans. Under Sultan Murad (moo-RAHD), Ottoman forces moved through Bulgaria and into the lands of the Serbians, who provided a strong center of opposition under King Lazar (lah-ZAR). But in 1389, at the Battle of Kosovo (KAWS-suh-voj), Ottoman forces defeated the Serbs; both King Lazar and Sultan Murad perished in the battle. Kosovo became a battlefield long revered and remembered by the Serbs. Not until 1480 were Bosnia, Albania, and the rest of Serbia added to the Ottoman Empire in the Balkans.

In the meantime, in 1453, the Ottomans also completed the demise of the Byzantine Empire. With 80,000 troops ranged against only 7,000 defenders, Sultan Mehmet II (meh-MET) laid siege to Constantinople. In their attack on the city, the Turks made use of massive cannons with 26-foot barrels that could launch stone balls weighing up to 1,200 pounds each. Finally, the walls were breached; the Byzantine emperor died in the final battle. Mehmet II, standing before the palace of the emperor, paused to reflect on the passing nature of human glory.

After their conquest of Constantinople, the Ottoman Turks tried to complete their conquest of the Balkans, where they had been established since the fourteenth century. Although they were successful in taking the Romanian territory of Wallachia (wah-LAY-kee-uh) in 1476, the resistance of the Hungarians initially kept the Turks from advancing up the Danube valley. Until the end of the fifteenth century, internal problems and the need to consolidate their eastern frontiers kept the Turks from any further attacks on Europe. But at the beginning of the sixteenth century, the Ottomans would renew their offensive against the West, challenging Hungary, Austria, Bohemia, and Poland and threatening to turn the Mediterranean into a Turkish lake.

The Church in the Renaissance

FOCUS QUESTION: What were the policies of the Renaissance popes, and what impact did those policies have on the Catholic Church?

As a result of the efforts of the Council of Constance, the Great Schism had finally been brought to an end in 1417 (see Chapter 11). The ending of the schism proved to be the council’s easiest task; it was much less successful in dealing with the problems of heresy and reform.

The Problems of Heresy and Reform

Heresy was not a new problem, and in the thirteenth century, the church had developed inquisitorial machinery to deal with it. But two widespread movements in the fourteenth and early fifteenth centuries—Lollardy and Hussitism—posed new threats to the church.

WYCLIF AND LOLLARDY English Lollardy was a product of the Oxford theologian John Wyclif (WIK-lif) (c. 1328–1384), whose disgust with clerical corruption led him to make a far-ranging attack on papal authority and medival Christian beliefs and practices. Wyclif alleged that there was no basis in Scripture for papal claims of temporal authority and advocated that the popes be stripped of their authority and their property. Believing that the Bible should be a Christian’s sole authority, Wyclif urged
Why would the Byzantine Empire have found it difficult to make alliances by 1403?

that it be made available in the vernacular languages so that every Christian could read it. Rejecting all practices not mentioned in Scripture, Wyclif condemned pilgrimages, the veneration of saints, and a whole series of rituals and rites that had developed in the medieval church. Wyclif attracted a number of followers who came to be known as Lollards.

HUS AND THE HUSSITES A marriage between the royal families of England and Bohemia enabled Lollard ideas to spread to Bohemia, where they reinforced the ideas of a group of Czech reformers led by the chancellor of the university at Prague, John Hus (1374–1415). In his call for reform, Hus urged the elimination of the worldliness and corruption of the clergy and attacked the excessive power of the papacy within the Catholic Church. Hus's objections fell on receptive ears, for the Catholic Church, as one of the largest landowners in Bohemia, was already widely criticized. Moreover, many clergymen were German, and the native Czechs' strong resentment of the Germans who dominated Bohemia also contributed to Hus's movement.

The Council of Constance attempted to deal with the growing problem of heresy by summoning John Hus to the council. Granted safe conduct by Emperor Sigismund, Hus went in the hope of a free hearing of his ideas. Instead he was arrested, condemned as a heretic (by a narrow vote), and burned at the stake in 1415. This action turned the unrest in Bohemia into revolutionary upheaval, and the resulting Hussite wars racked the Holy Roman Empire until a truce was arranged in 1436.

REFORM OF THE CHURCH The efforts of the Council of Constance to reform the church were even less successful.
than its attempt to eradicate heresy. The council passed two reform decrees. *Sacrosancta* (sak-roh-SANK-tuh) stated that a general council of the church received its authority from God; hence every Christian, including the pope, was subject to its authority. The decree *Frequens* (FREE-kwens) provided for the regular holding of general councils to ensure that church reform would continue. Taken together, *Sacrosancta* and *Frequens* provided for a legislative system within the church superior to the popes.

Decrees alone, however, proved insufficient to reform the church. Councils could issue decrees, but popes had to execute them, and popes would not cooperate with councils that diminished their authority. Beginning as early as Martin V in 1417, successive popes worked steadfastly for thirty years to defeat the conciliar movement. The final blow came in 1460, when Pope Pius II issued the papal bull *Excrabillis* (ek-suh-KRAY-buh-liss), condemning appeals to a council over the head of a pope as heretical.

By the mid-fifteenth century, the popes had reasserted their supremacy over the Catholic Church. No longer, however, did they have any possibility of asserting supremacy over temporal governments as the medieval papacy had. Although the papal monarchy had been maintained, it had lost much moral prestige. In the fifteenth century, the Renaissance papacy contributed to an even further decline in the moral leadership of the popes.

### The Renaissance Papacy

The Renaissance papacy encompasses the line of popes from the end of the Great Schism (1417) to the beginnings of the Reformation in the early sixteenth century. The primary concern of the papacy is governing the Catholic Church as its spiritual leader. But as heads of the church, popes had temporal preoccupations as well, and the story of the Renaissance papacy is really an account of how the latter came to overshadow the popes’ spiritual functions.

The manner in which Renaissance popes pursued their interests in the Papal States and Italian politics, especially their use of intrigue and even bloodshed, seemed shocking. Of all the Renaissance popes, Julius II (1503–1513) was most involved in war and politics. The fiery “warrior-pope” personally led armies against his enemies, much to the disgust of pious Christians, who viewed the pope as a spiritual leader. As one intellectual wrote, “How, O bishop standing in the room of the Apostles, dare you teach the people the things that pertain to war?”

To further their territorial aims in the Papal States, the popes needed loyal servants. Because they were not hereditary monarchs, popes could not build dynasties over several generations and came to rely on the practice of *nepotism* to promote their families’ interests. Pope Sixtus IV (1471–1484), for example, made five of his nephews cardinals and gave them an abundance of church offices to build up their finances (the word *nepotism* is in fact derived from the Latin *nepos*, meaning “nephew”). Alexander VI (1492–1503), a member of the Borgia family who was known for his debauchery and sensuality, raised one son, one nephew, and the brother of one mistress to the cardinalate. A Venetian envoy stated that Alexander, “joyous by nature, thought of nothing but the aggrandizement of his children.” Alexander scandalized the church by encouraging his son Cesare to carve out a state for himself from the territories of the Papal States in central Italy.

The Renaissance popes were great patrons of Renaissance culture, and their efforts made Rome a cultural leader at the beginning of the sixteenth century. For the warrior-pope Julius II, the patronage of Renaissance culture was mostly a matter of policy as he endeavored to add to the splendor of his pontificate by tearing down the Basilica of Saint Peter, which had been built by the emperor Constantine, and beginning construction of the
The greatest building in Christendom, the present Saint Peter's Basilica.

Julius’s successor, Leo X (1513–1521), was also a patron of Renaissance culture, not as a matter of policy but as a deeply involved participant. Such might be expected of the son of Lorenzo de’ Medici. Made an archbishop at the age of eight and a cardinal at thirteen, he acquired a refined taste in art, manners, and social life among the Florentine Renaissance elite. He became pope at the age of thirty-seven, reportedly remarking to the Venetian ambassador, “Let us enjoy the papacy, since God has given it to us.” Raphael was commissioned to do paintings, and the construction of Saint Peter’s was accelerated as Rome became the literary and artistic center of the Renaissance.

**CHAPTER SUMMARY**

Beginning in Italy, the Renaissance was an era that rediscovered the culture of ancient Greece and Rome. It was also a time of recovery from the difficulties of the fourteenth century as well as a period of transition that witnessed a continuation of the economic, political, and social trends that had begun in the High Middle Ages.

The Renaissance was also a movement in which intellectuals and artists proclaimed a new vision of humankind and raised fundamental questions about the value and importance of the individual. The humanists or intellectuals of the age called their period (from the mid-fourteenth to the mid-sixteenth century) an age of rebirth, believing that they had restored arts and letters to new glory. Humanism was an intellectual movement based on the study of the Classical literary works of Greece and Rome. The goal of a humanist education was to produce individuals of virtue and wisdom. Civic humanism posited that the ideal citizen was not only an intellectual but also an active participant in the life of the state.

The Renaissance is perhaps best known for its artistic brilliance. Renaissance artists in Italy sought not only to persuade onlookers of the reality of the object they were portraying, but also to focus attention on human beings as “the center and measure of all things.” This new Renaissance style was developed, above all, in Florence, but at the end of the fifteenth century, Renaissance art moved into a new phase in which Rome became the new cultural center. In the works of Leonardo da Vinci, Raphael, and Michelangelo, the High Renaissance ideal of beauty was convincingly portrayed.

The Renaissance in Europe was also an era of “new monarchies,” best seen in England, France, and Spain. Monarchs in these countries limited the private armies of the aristocracy, raised taxes, created professional armies, and in the process were able to reestablish the centralized power of monarchical governments. At the same time, the Renaissance popes became increasingly mired in political and temporal concerns that overshadowed their spiritual responsibilities.

Of course, the intellectuals and artists of the Renaissance wrote and painted for the upper classes, and the brilliant intellectual, cultural, and artistic accomplishments of the Renaissance were products of and for the elite. The ideas of the Renaissance did not have a broad base among the masses of the people. The Renaissance did, however, raise new questions about medieval traditions. In advocating a return to the early sources of Christianity and criticizing current religious practices, the humanists raised fundamental issues about the Catholic Church, which was still an important institution. In the sixteenth century, as we shall see in the next chapter, the intellectual Renaissance of the fifteenth century gave way to a religious Renaissance that touched the lives of people, including the masses, in new and profound ways.
CHAPTER REVIEW

Upon Reflection

Q What was the pattern of political development in Renaissance Italy? What new political practices (statecraft) did the Italians contribute to Europe, and how were these new political practices reflected in the work of Machiavelli?

Q What was the relationship between Italian Renaissance humanism and Italian Renaissance art?

Q What impact did the policies of the Renaissance popes have on the Catholic Church?

Key Terms

Renaissance (p. 341)
etrepreneurs (p. 343)
estates (p. 344)

RENAISSANCE HUMANISM A good introduction to Renaissance humanism can be found in C. G. Nauert Jr., Humanism and the Culture of Renaissance Europe, 2nd ed (Cambridge, 2006). The fundamental work on fifteenth-century civic humanism is...

Visit the CourseMate website at www.cengagebrain.com for additional study tools and review materials for this chapter.
1. Which of the following statements best illustrates the role of women during the fifteenth century?
   (A) Dowries played significant roles in solidifying marriage arrangements between families.
   (B) Household duties were equally distributed between men and women.
   (C) Wealthy families had significantly fewer children than poor families.
   (D) Large numbers of wealthy women received a formal education.
   (E) Women were involved in both religious and political activities.

2. Which of the following was NOT a reason why the Renaissance developed first in Italy?
   (A) Italy was the center of trade in the Mediterranean Sea.
   (B) Italian city-states fostered a new urban secular society.
   (C) The Italian states were the most stable political entities in Europe.
   (D) Italian banking families used their wealth to fund new artists of the time.
   (E) Italy’s Greco-Roman past inspired intellectuals to pursue greater knowledge.

3. All of the following are considered humanist thinkers EXCEPT
   (A) Lorenzo Valla.
   (B) Leonardo Bruni.
   (C) Petrarch.
   (D) Pope Leo X.
   (E) Castiglione.

4. “As I have said, he should do what is right if he can; but he must be prepared to do wrong if necessary.” This statement was most likely made by
   (A) Cesare Borgia.
   (B) Niccolò Machiavelli.
   (C) Cosimo de’ Medici.
   (D) Pico della Mirandola.
   (E) Giordano Bruno.

5. The Italian Renaissance brought about
   (A) great social upheaval, resulting in more social equality.
   (B) the adoption of Gothic architectural styles, especially in Florence and Rome.
   (C) new artistic techniques such as the use of perspective and shading.
   (D) a new sense of unity between the emerging humanists and the Roman Catholic Church.
   (E) widespread political reform.

6. The primary difference between Northern Renaissance artists and Italian Renaissance artists was that
   (A) Northern Renaissance artists received financing primarily from merchants, while Italian Renaissance artists were financed only by the Roman Catholic Church.
   (B) Northern Renaissance artists focused more on wooden altarpieces and specific details in their paintings, whereas Italian Renaissance artists concentrated more on perspective and the portrayal of the nude human form.
   (C) Northern Renaissance artists worked mainly with oils and completed few sculptures, whereas Italian Renaissance artists produced oil paintings and sculptures in bronze and marble.
   (D) Northern Renaissance artists included Albrecht Dürer and Jan van Eyck, while Italian painters included Michelangelo and Dante Alighieri.
   (E) Northern Renaissance artists focused on creating works of grandeur to produce deep emotional reactions, whereas Italian artists focused on everyday subjects and landscapes.

7. The achievements of the new monarchs during the Renaissance included all of the following EXCEPT
   (A) they increased their political authority within their own countries.
   (B) they decreased the power of the noble class.
   (C) they increased the power of the Roman Catholic Church within their countries.
   (D) they increased the power of the state military relative to noble armies.
   (E) they increased the taxes that subjects paid to the crown.

8. Compared to their counterparts in western Europe, eastern European monarchs struggled MORE with problems such as
   (A) warfare in Asia.
   (B) growth of the middle class as a result of mercantilist policies.
   (C) social unrest and constant peasant uprisings.
   (D) weak ruling families with few ties or alliances to other monarchs.
   (E) mass religious conversions of their subjects to Islam and war with the Roman Catholic Church.
9. The Roman Catholic Church of the fifteenth century could best be described as a
   (A) political entity ruled by a pope and a king who shared religious power.
   (B) religious institution with no interest in political affairs.
   (C) political entity with little or no interest in religious duties.
   (D) social institution providing relief and assistance to European peasants.
   (E) religious entity with additional interests in political and economic power.

10. The man most often credited as being the father of humanism is
    (A) Erasmus.
    (B) Cicero.
    (C) Dante.
    (D) Petrarch.
    (E) Chaucer.

11. The five most influential city-states in Italy were the
    (A) duchy of Milan, republic of Venice, kingdom of Naples, Papal States, and republic of Florence.
    (B) republic of Rome, kingdom of Lucca, state of Sicily, duchy of Siena, and Papal States.
    (C) duchy of Savoy, kingdom of Naples, republic of Parma, republic of Rome, and republic of Florence.
    (D) Papal States, republic of Venice, duchy of Siena, kingdom of Lucca, and duchy of Milan.
    (E) republic of Florence, Sicily, kingdom of Naples, duchy of Corsica, and kingdom of Naples.

12. The Peace of Lodi in 1454
    (A) sealed the defeat of Constantinople by the Ottoman Empire.
    (B) introduced the concept of “balance of power” to the Italian city-states.
    (C) established a unified Italian peninsula under one monarch.
    (D) contributed to the Habsburg-Valois conflict.
    (E) contributed to the end of the Italian Renaissance.

13. Which of the following does NOT describe the humanists of the Renaissance?
    (A) They focused much of their attention on the rediscovery of ancient texts and writings.
    (B) They ignored the topic of religion in their writings.
    (C) They focused their attention on the achievements of man.
    (D) They often conveyed their teaching in the vernacular.
    (E) Some of them espoused the notion of pantheism, as seen in their writings.

14. Filippo Brunelleschi’s dome of the Duomo
    (A) illustrated a shift from medieval architectural design to a more classical design reminiscent of ancient Greece and Rome.
    (B) showcased the Gothic architecture of medieval European society.
    (C) was built to glorify the supremacy of the papacy.
    (D) was a blending of architectural styles resulting from Brunelleschi’s travel outside Europe.
    (E) is an example of the new humanist architecture that became prominent in northern France.

15. Ferdinand and Isabella were responsible for all of the following EXCEPT
    (A) the unification of Spain under the combined regions of Aragon and Castile.
    (B) pushing the Moors out of Granda in an attempt to create greater Spanish unity.
    (C) expelling Jews from the newly unified Spain and instituting the Inquisition.
    (D) the creation of a new Spanish language that highlighted regional words and phrases.
    (E) the establishment of strong unified infantry force.
